

Release notes - Pure 5.13.0 (4.32.0)

Created by Manya Buchan, last modified by Malene Knudsen 41 minutes ago

Highlights of this release

Research Outputs: Available updates from online sources

As part of our continuing focus on increasing automation to reduce the burden on our users with regard to data entry into Pure, this release introduces exciting new functionality to update existing Pure Research Output records with new and potentially more complete metadata from available online sources. The feature searches online sources (such as, but not limited to, Scopus, Web of Science, and PubMed) for updated information on existing Research Outputs in Pure and presents users with the updated data for consideration. [See below for more info ...](#)

ORCID: New Research Output import source

We are very pleased to announce the addition of ORCID as an import source for Research outputs in this release, fully incorporated into our recently added [Automated search by ID](#) functionality and the [Updates from online sources](#) feature in this release. [See below for more info ...](#)

Pure Portal update status overview

To make it easier to manage and understand Pure Portal updates, we have made the Portal content and configuration update process more transparent. [See below for more info ...](#)

[Watch the 5.13 New & Noteworthy seminar](#)

We are pleased to announce that version 5.13.0 (4.32.0) of Pure is now released

Always read through the details of the release - including the [Upgrade Notes](#) - before installing or upgrading to a new version of Pure

Release date: 10 October 2018

Hosted customers:

- *Staging environments (including hosted Pure Portal) will be updated 10 October 2018 (APAC + Europe) and 11 October 2018 (North/South America)*
- *Production environments (including hosted Pure Portal) will be updated 24 October 2018 (APAC + Europe) and 25 October 2018 (North/South America)*

[Download the 5.13 Release Notes](#)
last updated 10 October 2018

PARTICULAR ITEMS TO NOTE WITH THIS RELEASE

Old Pure web service API will be deprecated in 5.13.0 (October 2018) and removed with 5.14.0 (February 2019)

We announced in the [Pure 5.9.0 release](#) (June 2017) our plans to remove the old web service API upon the Pure 5.13.0 release in October 2018. Over the past few months, we have received feedback that our users would like us to extend the overlap period of the old web service API. As such we will not be removing the old web service API with the release of Pure 5.13.0, but we will deprecate* it with the 5.13.0 release and remove it in the 5.14.0 release in February 2019.

**Deprecation means that we will no longer fix or improve the old web service API, but you can continue using it until its removal in 5.14.0.*

We encourage everyone to make sure you have adapted your applications to use the new web service API. Details of the new web service API can be found [here](#).

Please also be aware that the new web service API only supports the Unified Project Model. Content in the old Project model will not be available on the new web service API. If you implemented Pure from 4.13 or later (this includes all of Pure 5), you are already using the Unified Project Model. If you are in doubt, you can check the Administrator tab > Unified Project Model tab. If this tab with the Unified Project Model settings is available, you are using the Unified Project Model. Please contact the [Pure Support team](#) for assistance in migrating to the Unified Project Model.

Removal of the 5.9 web service API endpoint

Pure 5.13.0 is the first release where a new web service endpoint (the 5.9 API) will be removed. If you are currently using the 5.9 endpoint, you will need to update your queries to use one of the supported web service endpoints. For this 5.13.0 version these are:

- 5.10 API
- 5.11 API
- 5.12 API
- newly introduced 5.13 API

You can find more information about the web service delivery module in the [Pure 5.9.0 release notes](#). We will continuously inform you about removed web service endpoints in the individual [Upgrade Notes](#) of the release.

Faculty and Academic Activity Reporting (FAAR)

We recently discovered an issue with FAAR functionality such that, under certain conditions, when a batch download of FAAR reports was actioned, Parent organisations were removed from Organisational units in the database, leading to orphaned Organisational units in the hierarchy (if you synchronise your Organisational unit content, Parents would be re-instated upon the next synchronisation). This issue has been resolved in both 5.12.4 and 5.13.0, and a job to resolve the Organisational hierarchy issues caused is expected in the 5.13.0-1 release.

We have been in touch with all customers who have enabled FAAR with more detail on this issue and work being undertaken to fix the Organisational hierarchy issues caused. If you have not heard from us but think you have been affected, please contact the [Pure Support team directly](#).

Espacenet: New API requires access credentials

[Espacenet](#) has released a new version of their API, which now requires the use of access credentials. All customers using Espacenet as an import source must upgrade their Pure to at least version 5.12.2. Further details are available from the [5.12.2 release notes](#).

Funding Discovery

Customers using the Funding Discovery module are requested to upgrade their Java 1.8 version to version 1.8.0_162-b12 or newer. Older versions cause SSL errors (SSL handshake failure from the secure HTTPS connection made from Pure to the Pure funding service).

5.13.0 (4.32.0) New and noteworthy

- 1. GDPR (General Data Protection Regulation)
- 2. Web accessibility
 - 2.1. Improved reporting experience for keyboard and screen reader users
- 3. Pure Core: Administration
 - 3.1. Research outputs: Available updates from online sources
 - 3.1.1. Presentation of available updates from online sources
 - 3.1.2. Acting upon available updates
 - 3.1.3. Search, matching, and comparison processes
 - 3.1.4. Supported sources
 - 3.1.5. Configuring the Available updates from online sources feature
 - 3.1.6. PRS customers
 - 3.2. Research Outputs: Addition of Case notes
 - 3.3. Research Outputs: Ability to change the order of Publication categories
 - 3.4. Unified Project Model: Updates to Cost codes on Applications and Awards
 - 3.5. Unified Project Model: Update to integration with external budgeting tools
 - 3.6. Unified Project Model: Description fields for Applications, Awards, and Projects now offer same formatting options
 - 3.7. Unified Project Model: Separate classification scheme for Document types on Awards
 - 3.8. Unified Project Model: Submitter of applications
 - 3.9. Unified Project Model: Negative budget values in Applications and Awards
- 4. Pure Core: 3rd party import sources
 - 4.1. ORCID: New Research output import source
 - 4.2. Espacenet: New API requires access credentials
 - 4.3. SciVal Access: New user will be created when enabled
- 5. Pure Core: Web services
 - 5.1. New Web Service: General Changes to POST calls
 - 5.2. New Web Service: Organisation Hierarchy added
 - 5.3. New Web Service: Downloads Endpoint
 - 5.4. New Web Service - Award milestones
 - 5.5. New Web Service - Highlighted content calls added
 - 5.6. New Web Service - 'Content modified' added as filter option to endpoints
 - 5.7. New Web Service - 'Academic' added as filter option to Persons endpoint
 - 5.8. New Web Service - Author roles filter for advanced queries
 - 5.9. New Web Service - Keyword filter for advanced queries
 - 5.10. New Web Service - Keyword structure on WS results changed
 - 5.11. New Web Service - Page information added for paging
 - 5.12. New Web Service - Links to PDF files added to Curriculum Vitae endpoint
 - 5.13. New Web Service - Supported added for 'pretty' URL links
 - 5.14. New Web Service - Support added for Court cases added to research output

- 5.15. New Web Service - Improved ordering options
- 5.16. New Web Service - Change in Activities endpoint
- 5.17. New Web Service - Planned name change of order options on Research output for 5.14.0
- 6. Reporting
 - 6.1. Technology preview of new Reporting module
 - 6.1.1. Terminology
 - 6.1.2. Additional content types
 - 6.1.3. Sharing
 - 6.1.4. Filtering
 - 6.1.5. User roles
 - 6.1.6. Tips and Feedback functions
 - 6.1.7. Pure Academy classes
 - 6.2. FAAR (Faculty and Academic Activity Reporting) enhancements
- 7. Pure Portal
 - 7.1. Portal update status overview
 - 7.2. Portal use of upgraded web service API
- 8. Awards Management
 - 8.1. Milestones accessible throughout workflow
 - 8.2. Update to management of Application, Award, and Project subtypes
 - 8.3. Tabular view now available for Personal users
 - 8.4. Applicants can request peer review when in read-only mode
- 9. Funding discovery
 - 9.1. Upgrade of Funding Discovery module
- 10. Country-specific features
 - 10.1. UK: REF2021: Phase 2
 - 10.1.1. REF OA compliance monitoring: Updates due to confirmation of final policy
 - 10.1.2. REF OA monitoring: Summary screen updates
 - 10.1.3. REF OA compliance status now shown on REF2 record
 - 10.1.4. Re-naming of 'Not REF eligible' REF OA compliance status
 - 10.1.5. New "Compliant outputs with 'No exception' selected" editorial task
 - 10.1.6. New 'REF2021 Exception' bulk action
 - 10.1.7. Pure Academy classes
 - 10.2. Netherlands: SEP/KUOZ enhancements
 - 10.2.1. Export to Excel option for all SEP and KUOZ tables
 - 10.2.2. Visibility configurations expanded to include visibility of SEP/KUOZ tab on Persons
 - 10.2.3. Updated FTE/MJE and Funding data import file
 - 10.2.4. Warning message to highlight impact on SEP/KUOZ FTE if Organisational unit affiliation period is updated
 - 10.2.5. Improved display of SEP/KUOZ content on Person record
 - 10.2.6. New SEP/KUOZ Reporter role
 - 10.3. Australia: Validation on FoR % apportionments outwith ERA module
- 11. Additional features of this release
 - 11.1. Visibility of content: Revised information text when enabling confidential content
 - 11.2. Personal profile: Student users now able to edit profiles
 - 11.3. Personal profile: File size limit for Profile photos
 - 11.4. User documentation: Dynamic loading
- Resolved issues

1. GDPR (General Data Protection Regulation)

In this release we have introduced some GDPR-related access changes to reporting in Pure, based on customer feedback:

- The **Submitter of Research Output** role no longer has access to the Reporting module. We have created a new organisational **Reporter of Research Output role**. To grant access to the Reporting module to Submitters of Research Output, you will need to assign them the new Reporter of Research Output role as well.
- **Raw data spreadsheet layout in Reporting module:** The ability to select the 'Raw data spreadsheet' layout in the Reporting module is now only available to the Administrator role. Access to any existing reports with this layout will be removed for all users other than Administrators.
- **Reporting module:** We have removed all scenarios where it was possible for non-Administrator users to report on Person Gender and Date of birth when reporting on other content.

[Back to top of page](#) 

2. Web accessibility

2.1. Improved reporting experience for keyboard and screen reader users

The Technology preview of the Reporting Module has been enhanced as part of our continued effort to ensure that the Pure backend is accessible to people with disabilities. This release includes several core navigation components and adds some contextual information for screen readers, bringing the module closer in compliance with the WCAG 2.1 and WAI-ARIA accessibility standards. The core accessibility improvements will roll out across the Pure backend as part of our general user interface refresh.

[Click here for more details ..](#)

- **Improved experience navigating the Data table with a screen reader**

We have enhanced the Data table to allow tab focus on individual cells. Cell values and their context are now announced by screen readers and users can navigate between cells of different rows and columns using the arrow keys.

- **Improved navigation and screen reader accessibility in the Data table Value and Filter panels**

The Data table tool panels have been updated to improve accessibility for users who rely on keyboard navigation or screen readers. Screen readers are now able to correctly identify each tab and users can navigate between tabs using standard navigation keys.

Changing the type of value in an existing column has been enhanced with screen reader-friendly markup and navigation, enabling a keyboard user to expand and collapse categories and select values within categories or sub-categories.

The list of filter options in the filter tab has been made accessible via keyboard navigation using the same navigation as the value tab.

- **Save and warning dialogs are now recognized as dialogs by screen readers**

Dialogs such as the Save form and full screen warnings are now labeled as such and tab focus is kept within the dialog itself. Dialogs can be closed via the Escape key or by focusing the close icon in the upper right corner.

- **Drop Down components are now accessible for screen readers and announced as aria comboboxes**

- **Screen readers now read descriptions for input fields in range filters**

- **Popup menus, such as the export menu are now recognized by screen readers and implement standard-based navigation and focus handling.**

[Back to top of page](#) 

3. Pure Core: Administration

3.1. Research outputs: Available updates from online sources

As part of our continuing focus on increasing automation to reduce the burden on our users with regard to data entry into Pure, this release introduces new functionality to update existing Pure Research Output records with new and potentially more complete metadata from available online sources. The feature searches online sources for updated information on existing Research Outputs in Pure and presents users with the updated data for consideration.

By default, this feature is **ENABLED** and updates are by default only presented to Administrators - except for PRS customers using the QABO '*Scopus Publication Update Job*', where the feature is by default **DISABLED**. Further information for PRS customers is available [below](#).

Editing records while updates and pending consideration

While updates from online sources are pending consideration, Research outputs can still be edited and saved in the normal way, but with some restrictions:

- For users not enabled to access the available updates from online sources (e.g. Personal users), all metadata fields in the Research output editor will continue to be editable while updates from online sources are pending consideration
- For users enabled to access available updates from online sources (e.g. Administrator), those metadata fields with updates pending consideration will not be editable in the editor. Should the user wish to modify fields with updates pending consideration, the user will first need to address all fields with available updates

3.1.1. Presentation of available updates from online sources

When updated metadata is found for existing Research Output records in Pure (as per the configuration and matching details provided below), Administrators are presented with a list of Outputs with available updates. For each Output, the Administrator can then review these updates and decide the appropriate action (accept, ignore, merge).

The screenshot shows the 'Available updates from online sources' section in the Pure interface. The record is titled '15 Years of Research on Redirected Walking in Immersive Virtual Environments'. The interface includes a sidebar with navigation options like 'EDIT', 'OVERVIEW', 'HISTORY AND COMMENTS', 'BFI', and 'NOTIFICATIONS'. The main content area displays a table of updates with columns for 'Type', 'Current value', and 'New' values. A 'Check record online: SCOPUS' button is visible. The workflow status is 'For approval'.

Type	Current value	New
Review article	/dk/atira/pure/researchoutput/researchoutputtypes/contributiontojournal/systematicreview	Journal article
Publication statuses and dates	Published - 2018	Published - 1 Mar 2018
Pages (from-to)	No value	44-56

[Click here for more details...](#)

The list of Research outputs with available updates from online sources is accessible through the menu under **Research outputs**.

The screenshot shows the 'Research outputs' menu in the Pure interface. The menu is titled 'Editorial overview' and includes the following items: 'Research outputs' (130212), 'My research output' (0), 'Available updates from online sources' (1655), 'Organisations with import candidates' (0), 'Persons with import candidates' (0), 'Research outputs with electronic versions' (67209), 'Duplicate title' (2280), 'Duplicate ISBN' (113), 'Duplicate DOI' (6), 'Activities', 'Prizes', 'Press/Media', and 'Applications'.

Alternatively, records with available updates can be filtered using the filter options in the Research outputs window. Also available is the ability to filter available updates by import source.

The screenshot shows the 'Research outputs' window in the Pure interface. The window title is 'Research outputs' and it displays a list of filters. The 'Available updates by import source' filter is highlighted with a red box. The list of filters includes: 'Author collaboration associated', 'Author collaborations', 'Author count', 'Available updates', 'Available updates by import source', 'BFI basic points', 'BFI check', 'BFI check duration', 'BFI conflict', 'BFI conflict resolution status', 'BFI duplicate', and 'BFI publication'.

NOTE:

- If the only updates available are for the *Keywords* and *Other links* fields, the updates will **not** be presented to the user for consideration and the fields will not be updated. If updates are found for any other fields, the available updates will be presented to the user for consideration.

3.1.2. Acting upon available updates

To enable authorized users to consider the available updates from online sources, a new 'Available updates from online sources' window of the Research output editor has been introduced, within which the user can choose to accept, ignore, or merge each available update.

[Click here for more details ..](#)

Upon selecting an Output with available updates from online sources, the Research output editor opens to a new 'Available updates from online sources' window of the Research output editor.

Differences in metadata fields between the existing Pure Research output record and the import source(s) fields are highlighted in yellow.

The screenshot displays the 'Available updates from online sources' interface. It features a sidebar on the left with navigation options: EDIT (Available updates, Metadata, Metrics, Translation), OVERVIEW (Relations, Fingerprints, Display), HISTORY AND COMMENTS (History and comments), BFI (BFI information), and NOTIFICATIONS (Editors responsible for handling this submission). The main content area is titled 'Available updates from online sources' and includes a 'Check record online: SCOPUS' button. Below this, there are three sections: 'Type', 'Publication statuses and dates', and 'Pages (from-to)'. Each section has a 'Current value' and a 'New Scopus' value. In the 'Type' section, the 'Journal article' value is highlighted in yellow. In the 'Publication statuses and dates' section, the 'Published - 1 Mar 2018' value is highlighted in yellow. In the 'Pages (from-to)' section, the '44-56' value is highlighted in yellow. The bottom status bar shows 'Last saved: 08/10/2018 11:23', 'Workflow-status: For approval', and a 'Save' button.

- For fields in which the Pure Research output record is null or blank, the value from the import source(s) is pre-selected.
- Users can select from each of the options presented for each metadata field.
- Once selected, the chosen value is highlighted and non-selected values are crossed-out.
- For some metadata fields, the option to merge values is available.
- Updates relating to the Journal field are not available for selection, even if there are differences between the Pure record and the import source(s). This is to ensure that such a fundamental change can only be implemented by directly editing the affiliated Journal in the Research output record itself, and to ensure that master Journal records are not unexpectedly altered.

Note: To edit metadata fields that do not have available updates, simply click the Metadata menu tab and all normal editing options are available.

Viewing current publisher or database version of record

If the user would like to view the most current version of the record, as presented by the publisher (via the DOI) or database, a link is provided at the top of the window.

Heart rate monitoring for the detection of changes in mental demands during com
Research output: Contribution to book/anthology/report/conference proceeding / Article in journal

Available updates from online sources

For each field, select whether to keep the original value or update it to a new one. When selecting multiple sources for fields supporting merge, all unique values will be merged.

Publication statuses and dates

Current value: Published - 2019

How: Scopus Published - 1 Jan 2018

Check record online: DOI Scopus

Select one value

Last saved: 27/06/2018 13:20
Workflow status: Approved

Saving updated records

Once one metadata field has been updated, either by selecting of merging new data, the user **must** address all metadata fields presented in the *Available updates from online sources* window before being able to save the record. If the user does not address all fields, a message will prompt the user to address those fields where no choice was made.

Changes made to records that have been modified using this feature may be viewed in the **History and comments** window.

[Back to top of page](#)

3.1.3. Search, matching, and comparison processes

The search for available updates is based on unique identifiers in the Pure Research Output record. These are:

- Scopus publication IDs
- DOIs
- ISBNs
- ORCID ID*

* For those Research outputs with an ORCID ID (i.e. imported from ORCID - see [below](#)), the ORCID ID will be used to check ORCID for any updated data.

[Click here for more details...](#)

Provided the Pure Research output is within the parameters determined in the configuration settings (see below), the job uses these IDs to check enabled import sources. Once the IDs have been matched to records in each import source, the metadata fields in the Pure Research output are compared against the available metadata fields in each import source.

- For fields in the Pure Research output that are null or blank, all available non-null data for those fields are retrieved.
- For fields in the Pure Research output record that have data, these fields are compared using a comprehensive string or number matching process. Wholly different values and minor differences in spelling or extra or missing characters trigger the fields to be presented to the user in the update candidates user interface.

Publication statuses and dates

For publication dates, care has been taken to only suggest updates that are more refined or wholly different. For example:

	Current published date			
	2 June 2018			
	Source A	Source B	Source C	Source D
Data held by source	2018	2017	June 2018	July 2018
Outcome in Pure	Not suggested as an available update	Suggested as it is wholly different	Not suggested as it is less refined than the existing value	Suggested as it is wholly different

The publication status of records is also considered when checking for updates. For example, where a record has a current publication status of 'ePub ahead of print', any other statuses (and dates) found from online import sources will be presented to the user. If a user selects an additional status and date, this status and date will be **added** to the record, alongside the existing status(es) and date(s). Existing publication states will **not** be overwritten.

Electronic versions (files, DOIs, and links)

This feature will not modify or remove existing files or links held on the record. Existing DOIs will be checked against the available online sources and modifications will be suggested in the same way as other metadata updates are presented. Where a DOI update is selected, default values for related fields are as follows:

- Document version = Final published version
- Public access to file = Unknown
- License to document = Not set

[Back to top of page](#) 

3.1.4. Supported sources

The 'Available updates from online sources' feature supports the receipt of updates from the following sources:

- Web of Science
- Web of Science (lite)
- Embase
- Mendeley
- PubMed
- Scopus
- ORCID

Only those sources that are enabled as import sources will be included in the update search.

The list of sources will increase over time and notifications of new additions will be included in the relevant release notes.

There is currently no means of ordering or prioritising updates from the different sources; improvements to this are expected in upcoming releases.

[Back to top of page](#) 

3.1.5. Configuring the Available updates from online sources feature

The 'Available updates from online sources' feature is delivered in Pure as a cron job, with configuration options such as:

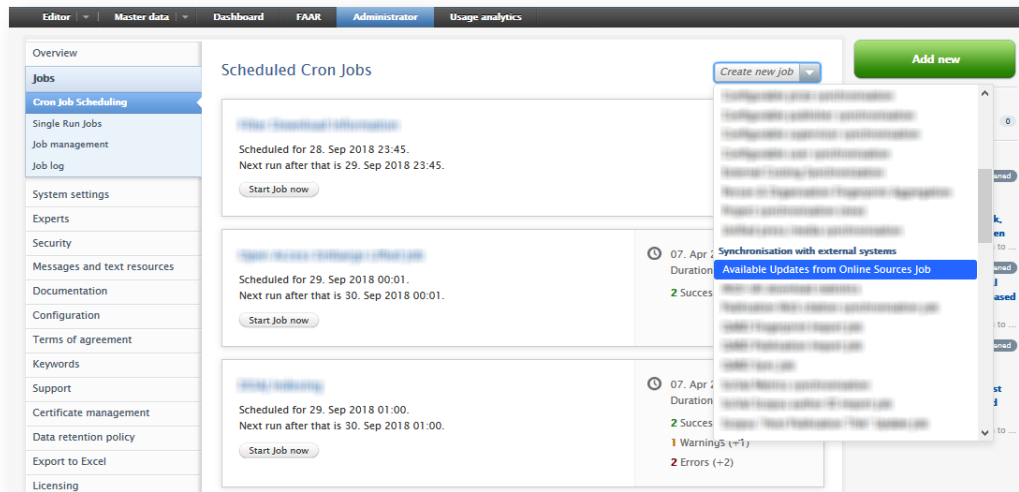

- scheduling
- years to search
- authorised user roles
- exclusion of individual import sources.

[Click here for more details ..](#)

Enabling the 'Available updates from online sources' feature

The 'Available updates from online sources' job can be added to the schedule by selecting it in the drop down list **Administrator > Jobs > Cron Job scheduling > Select job from Create new job** dropdown list. The job can be found under the 'Synchronisation with external systems' section.

By default, this feature is ENABLED, except for PRS customers using the QABO 'Scopus Publication Update Job', where the feature is by default DISABLED. Further information for PRS customers is available [below](#).

Configuration options

The 'Available updates from online sources' job can be configured as follows:

Starting year

The job is configured to only consider Research outputs published in the specified year and later. The default value is the current year. For example, configuring the Starting year as 2017 will result in only Research outputs published in 2017 being considered.

Configuration
Configure which user to run the job as, and any additional settings that apply to this job.

General configuration

Name *

Available Updates from Online Sources Job

Job configuration

Default configurations

Starting year *

The job will search for research output that is published within the given year or later.

2018

This configuration can be accessed via **Administrator > Jobs > Cron Job scheduling > Available Updates from Online Sources Job > Edit configuration > Default configurations**.

Configuration options

Access to results

This feature is, by default, only available to Administrators. But additional user roles (Editors and Validators) can be given access via *Administrator > Research outputs > Import configurations > Available Updates from Online Sources*.

Available updates from online sources

This cron job introduces the ability to check for updates to research outputs across all metadata fields, from active import sources that the institution has subscribed to. Sources currently covered include WoS, WoSLite, Embase, Mendeley, PubMed, Scopus, and ORCID. The option presented below enables viewing and editing rights for records with available updates.

Records with available updates can be viewed and edited by

Administrators and Editors

Nobody

Administrators only

Administrators and Editors

Administrators, Validators and Editors

On PubMed

On Web of Science (lite)

On Mendeley

Enabling / Disabling individual online sources

Online sources can be excluded from the feature by toggling on or off for the individual source at *Administrator > Research outputs > Import configurations > Available Updates from Online Sources* (by default, all enabled sources are included). Note that the list of online sources available is limited to those enabled as import sources (as per *Administrator > Research outputs > Import sources*).

Available updates from online sources

This cron job introduces the ability to check for updates to research outputs across all metadata fields, from active import sources that the institution has subscribed to. Sources currently covered include WoS, WoSLite, Embase, Mendeley, PubMed, Scopus, and ORCID. The option presented below enables viewing and editing rights for records with available updates.

Records with available updates can be viewed and edited by

Administrators and Editors

The following sources you have enabled are supporting to get updates from. If you don't want to receive updates from some of these, you can disable them. Notice when new sources gets updated to support updates, they will be enabled by default, but can at any point in time be disabled, and you will no longer receive updates from that source.

On Scopus

Off PubMed

On Web of Science (lite)

On Mendeley

[Back to top of page](#)

3.1.6. PRS customers

Records updated by normal use of the *Available updates from online sources* feature will affect the functioning of jobs specific to PRS customers that rely on Scopus as an import source.

[Click here for more details...](#)

Due to differences in the default scheduling of, and the data state against which checks are made, the *Available updates for online import sources* (daily/live data) and the QABO *Scopus Publication Update Job* (weekly/snapshot data), and the aggressive matching processes of the *Available updates for online import sources* job, it is highly likely that the suggested updates from *Available updates for online import sources* may precede updates added by the QABO job. If any of the suggested metadata updates are accepted through normal use of the *Available updates for online import sources* job, the QABO job, as designed, **will not** look for updates on the specific metadata fields of the records that were updated or modified by the *Available updates for online import sources* job.

Recommendations:

- For PRS customers that rely on the QABO *Scopus Publication Update Job* to update records from Scopus, it is recommended not to enable the *Available updates for online import sources* job to avoid any inadvertent modifications.
- If PRS customers would still like to enable the job, it is recommended that Scopus is excluded from the list of import sources to be used by the *Available updates for online import sources* job (see section on *Configuration options*).
- If PRS customers would still like to enable the job, and have Scopus as an import source to be used by the *Available updates for online import sources* job, **please contact the Pure Support team**.

[Back to top of page](#)

3.2. Research Outputs: Addition of Case notes

In response to a number of user requests, we have introduced 'Court cases' as an optional section in the Research output template, enabling the creation of Case notes. This feature will be of interest to those institutions with Law Schools or who undertake legal research, enabling the addition of court case decisions to Research outputs in a systematic manner, and enabling specific filtering and reporting on Case notes as Outputs.

Court case metadata can be added to the following Research output templates:

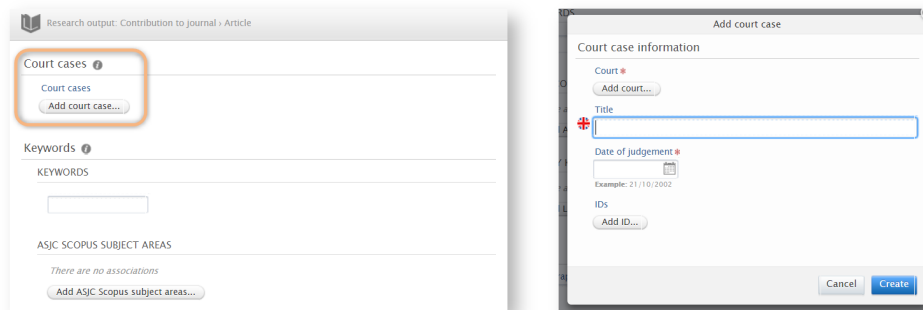

- Contribution to Journal
- Chapter in Book/Report/Conference proceeding
- Other contribution

These new Court case metadata fields are available in the new Reporting module

[Click here for more details ..](#)

Adding Court case details to Research outputs

Once enabled (see details below), Court cases can be added in the Research output editor. Clicking 'Add court case' will open the Court case information window.

Multiple Court cases can be added to a Research output. The metadata that can be captured per Court case includes:

- Court(s) (mandatory):
 - Court name
 - Court country
- Court case titles
- Court case IDs, with:
 - Multiple ID types per Court case, initially including ECLI and Case numbers, with the possibility for additional ID types
 - Multiple IDs per court case (mandatory if ID type selected)
- Date of judgement (mandatory)

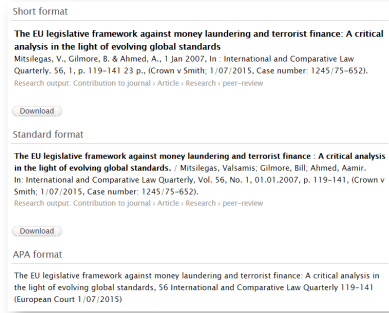

Display formats of Case notes

Display formats of Case notes

A Case note (the combination of a Research output + Court case details) as research output is cited in full detail in the following formats:

- Short render
- Long render
- Standard format
- APA format
- Author format

The Case note will be shown in full detail in CVs so long as one of the citation formats above is selected as the Display format.

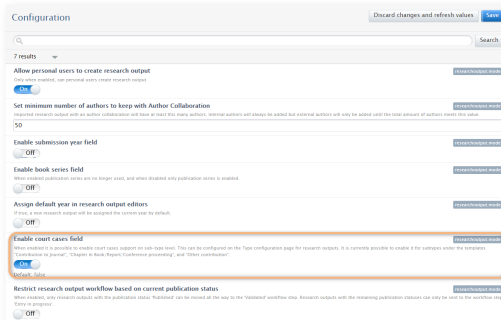

Enabling Court case fields on Research output templates

The ability to add Court cases to Research outputs is DISABLED by default. There is a two-step process for Administrators to enable Court cases.

Enable Court cases in Pure

Navigate to *Administrator > System settings > Research output model > toggle on Enable court cases field*

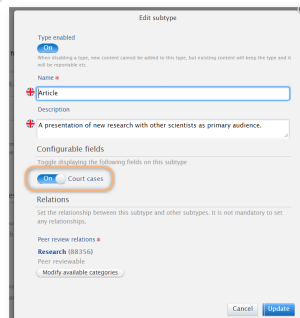

Enable Court cases on individual Research output templates

Court case metadata can be added to the following Research output templates:

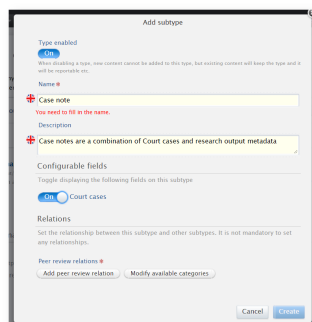

- Contribution to Journal
- Chapter in Book/Report/Conference proceeding
- Other contribution

For each desired template, users can enable Court cases via *Administrator > Research outputs then Templates and types > Edit [per RO type] > Edit subtype > toggle on Court cases*

Enabling Court case fields on Research output templates

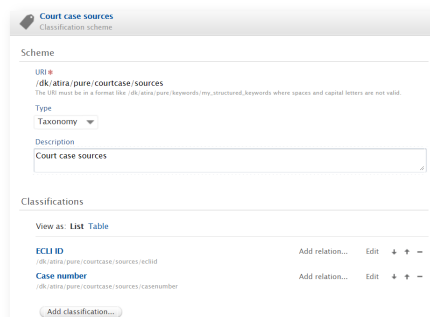

We strongly recommend that if an institution's users frequently create case notes, administrators should create a new 'Case notes' Output subtype, enabling Case notes to be easily identified by subtype and via filtering and reporting. To do so, go to **Administrator > Research outputs** then **Templates and types > Edit [per RO type] > Add subtype > toggle on Court cases**.

Court case IDs

Course case ID types are managed via the 'Court case sources' classification scheme (/dk/atira/pure/courtcase/sources). By default the following ID types are available, and more can be added via the classification scheme:

- ECLI ID
- Case number

[Back to top of page](#)

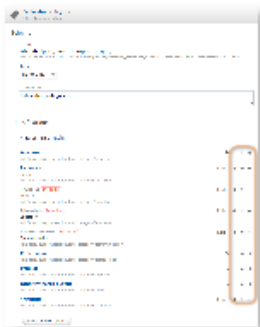

3.3. Research Outputs: Ability to change the order of Publication categories

This release includes improved functionality to enable you to change the order of Publication categories in the Research output editor, which previously could be a very cumbersome exercise. This brings this functionality in line with other content types (e.g. Activities, Press/Media, Prizes) where the order of Categories was defined in the relevant classification scheme.

[Click here for more details ...](#)

It is now possible to change the order of Publication categories in the Research output editor via the Publication categories classification scheme (`/dk/atira/pure/researchoutput/category`). Selecting the preferred order here, using the up/down arrows, will immediately feed through to the Research output editor, for all templates and sub-types.

[Back to top of page](#) 

3.4. Unified Project Model: Updates to Cost codes on Applications and Awards

We have updated the behavior on the Cost code field introduced in the [5.12.0 release](#). We have added the ability to:

- Change between recording Cost codes on budget or funding level
- Filter on Cost codes
- Sync Cost codes into Awards and Applications

[Click here for more details ..](#)

Change between recording Cost codes on budget or funding level

It is now possible to change between recording the Cost code on funding and budget level, even after content has already been created using either of the two levels. This setting is universal over the Pure instance.

This functionality enables greater flexibility for handling organizational or funder changes, allowing Cost codes for existing records to remain where originally captured, with Cost codes for all new Awards and Applications captured at the updated level.

To change the level, go to *Administrator > Unified Project Model > Module configuration > Configure funding on Applications and Awards*

Existing Awards and Applications

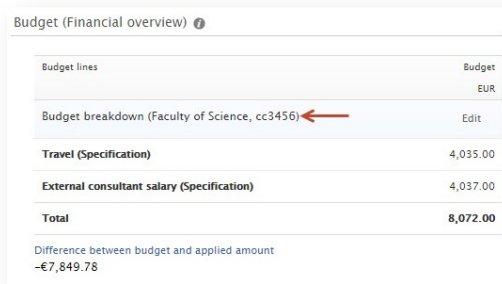

The new level is only for use on **NEW** Awards and Applications. Cost codes on existing Awards and Applications remain on the level on which they were originally created, displaying the recorded Cost code on the previous settings as read-only. In the example given above, where the administrator has changed the level from "Enabled on fundings" to "Enabled on budgets" the following effect is observed in an Application:

Read-only view in the metadata tab

View of the Cost code level that was made inactive

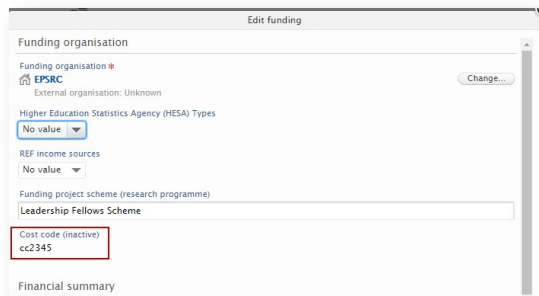

View of the Cost code level that was made active

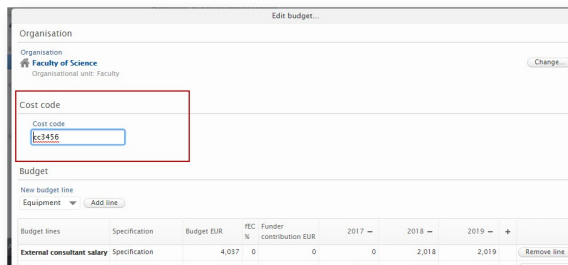

Cost code level inactive: Field is read-only in the 'Edit funding' tab

View of the Cost code level that was made inactive

View of the Cost code level that was made active

Filtering on Cost codes

It is now also possible to filter Applications and Awards on Cost code.

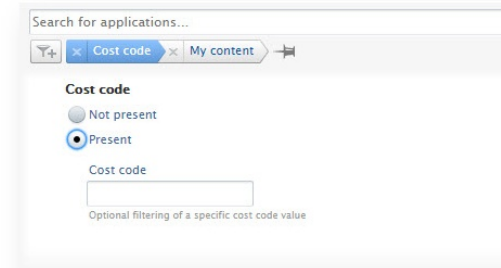

Filtering on Cost codes

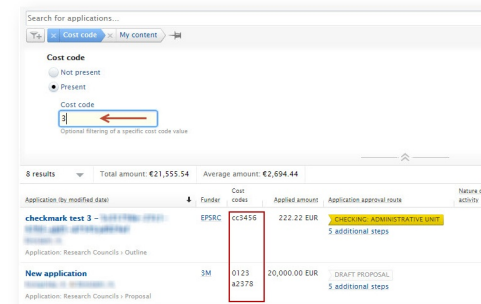

You can filter on whether Cost code is present or not

When you select that Cost code must be present, you are then able to search for a specific Cost code or a partial code.

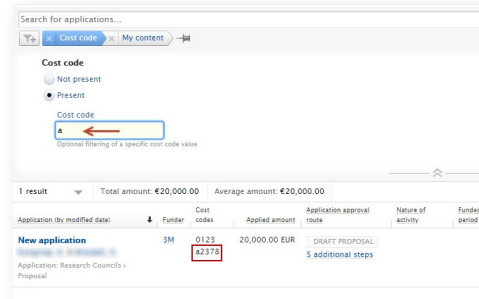

The partial search will search for any Cost codes that contain the value, regardless of position.

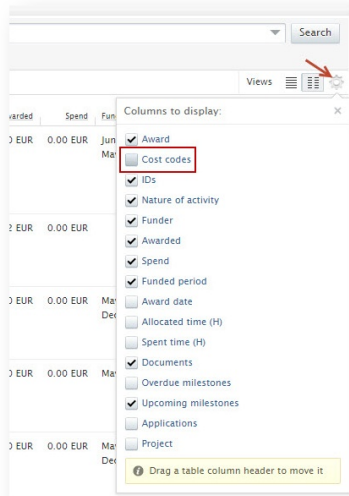

The search also works over multiple values. Here, for example, the search returns Applications where at least one of the Cost codes contains 'a'.

Filtering on Cost codes

Cost code visible in Tabular view

Add the Cost code field to the tabular view as below, and drag the column to create the appropriate ordering of columns.

The cost code is then displayed in the column for relevant Applications and Awards. Where the Cost code level has been changed and there are Cost codes in both fundings and budget level, this field displays a combination of these values, allowing you to filter on Cost codes regardless of which level these were created on.

Active Cost code field

Inactive Cost code field

Where there are multiple Cost codes, these are displayed below each other in the column.

Application (by modified date)	Funder	Cost codes	Applied amount	Application approval route	Nature of activity	Funded period
New application	3M	0123 a2378	20,000.00 EUR	DRAFT PROPOSAL		

Synchronize Cost codes into Awards and Applications

The Cost code field has been added to the XML format for Application and Award synchronizations, making it possible to include Cost codes from your external system.

[Back to top of page](#)

3.5. Unified Project Model: Update to integration with external budgeting tools

In the [5.12.0 release](#) we introduced the facility to synchronize budgeting data into Applications from [BlackDackel](#), an external costing system. In this release, we are building upon this functionality by:

- Making it possible to specify other synchronization sources for budgeting data.
- Upgrading the synchronization to make use of the synchronization improvements delivered in [5.12.0](#).

[Click here for more details ..](#)

There are two ways of setting up the synchronization with an external costing system:

- Synchronization with manual input of external costing project codes
- Synchronization of fixed fields without external costing project codes

Synchronization with manual input of external costing project codes

Set up the synchronization job by enabling the integration at *Administrator > Applications > External costing configuration*.

Synchronization with manual input of external costing project codes

External Costing Configuration

Enable integration with external costing system

This will enable integration with budgeting, budgeting and budget management to an external system.

Enable integration with external costing system

Next synchronization scheduled for 10/10/18 12:45:00 AM

Name of costing system:

Costing system 1:

Enter the name to use when showing status of external costing to editors and other users in the Application editor:

Application (sync URL):

http://demo.elsevier.com/externalcostingsystem.com

URL to the external costing system (e.g. http://demo.elsevier.com)

URL to authentication:

Optional URL for authenticating with a request containing 'username', 'password' and 'url'. Leave empty for disabling authentication.

User ID:

costing_system_syncUser

User principal such as a user ID or username.

Secret:

Required on other credentials used to authenticate against the external costing system.

Notification URL:

URL where Pure will notify the external costing system about applications to manage. Leave empty to disable notification of external costing system.

Save

On saving the configuration, the synchronization job is automatically set up and run. To access the job log go to *Administrator > Jobs > Job log > externalCostingSynchronisationCronJob*.

Name	Start	Duration (hours)	User	Status
automaticUpdateCandidatesJob	24. Sep 2018 18:00	0:00:00	root	Errors
externalCostingSynchronisationCronJob	24. Sep 2018 16:40	0:00:00	sync_user	Success
contentCheckJob	24. Sep 2018 14:52	0:00:00	root	Warnings
reindex	19. Sep 2018 14:26	0:45:56	atira	Success
awardCostCodeEmptyJobCallable	19. Sep 2018 12:20	0:00:55	root	Success

Once the synchronization with the external costing system is enabled, a 'External costing system ID' field is added to each Application, in which the user is able to link the application in Pure to the relevant budgeting item or project in the external system (this is non-mandatory).

Fundings

Add funding...

External costing system ID

Enter ID to link this application with an external costing system. Once saved updates will be synchronised from the external costing system.

After the External costing system ID has been added and the Application has been saved, the Application is now included the regular synchronization of budgets into Applications and a message is displayed in the Application to inform the user:

- That a budget synchronization is in effect for this Application.
- When the next synchronization is expected to run.

Fundings

Add funding... ← Note

This application is linked with Costing system 1. Next synchronization will happen at 9/3/18 5:10:00 AM. As funding information becomes available, it will be added to this Fundings section. The application was last synchronized at 9/3/18 5:00:00 AM.

Synchronization with manual input of external costing project codes

Notifications are sent to Applicants, Editors, and Administrator of Applications when a synchronization has occurred on a specific Application.

Synchronization of fixed fields without external costing project codes

It is also possible to create the link between the Application in Pure and the project in the external costing system by notifying the external system of relevant applications in Pure. To enable this type of synchronization you must enter a Notification URL when setting up the synchronization at *Administrator > Applications > External costing configuration*

Once the configuration is saved, Applications will display a 'Link this application with External costing system' checkbox in the Fundings section:

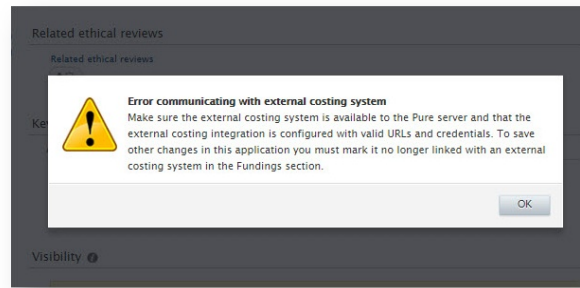

Checking the box and saving the Application sends a notification of the Application to the external costing system.

Fields that will be synchronized on saving the Application are:

- UUID
- Title
- Type
- Classified IDs
- Applicants (uuid, name, assigned role)
- Organizational units (uuid)
- Managing Organizational Unit (uuid)
- Expected period
- Submission date

If there are any problems in the synchronization settings the Application will not save, and an error message will be displayed. To save the Application in the meantime, uncheck the 'Link this application with External costing system' box.

Synchronization of fixed fields without external costing project codes

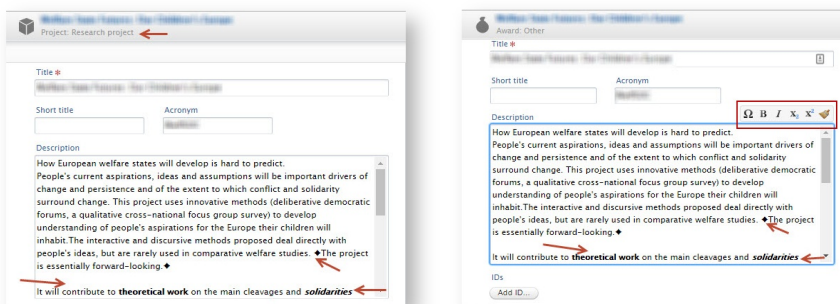

- When synchronization with an external costing system has been enabled:
 - the Fundings section of the Application is no longer mandatory, to allow for that data to be added via the synchronization after the Application has been created in Pure
 - it remains possible to add Fundings manually in Pure - these can just be added to the Application along with the synchronized budgets
- When synchronizing budgets into Pure ensure that the:
 - Base currency is set to the same currency in both the external system as in Pure
 - Budgeting is using the same level of granularity with regard to tracking over years. For example, if the budget in Pure is set to allow tracking of budget annually, and not just as a total value, and the external system is reporting a total value, this will not be synchronized into Pure, as Pure is expecting annual amounts.

[Back to top of page](#)

3.6. Unified Project Model: Description fields for Applications, Awards, and Projects now offer same formatting options

In this release, we have introduced formatting options for the Description field for Applications and Awards, bringing these editors in line with the Project editor. This was a particular issue when deriving an Application or an Award from a Project, when formatting would be lost.

This improvement relates to the following JIRA issues:

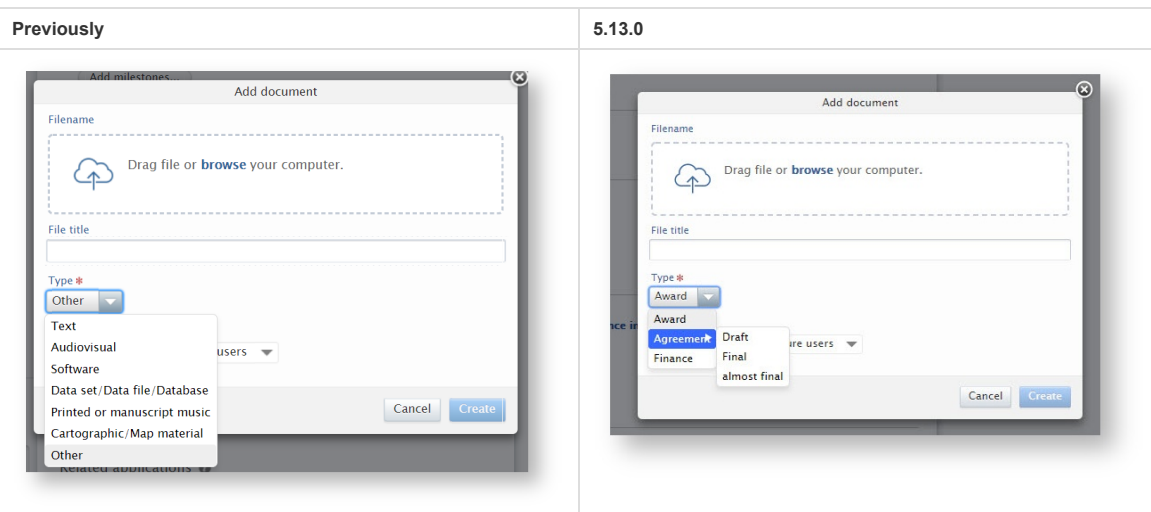

- [PURESUPPORT-42117](#) - Award Description / Project Description Rendered Differently **CLOSED**
- [PURESUPPORT-30390](#) - Description format - creating a Project from Award. **RELEASED**
- [PURESUPPORT-42383](#) - ASU: invalid XHTML in Project desc **RELEASED**

[Back to top of page](#)

3.7. Unified Project Model: Separate classification scheme for Document types on Awards

When adding documents to an Award, the Document Type field defaulted to 'Other', and the classification was not unique to the Awards content type and therefore included a number of irrelevant types. In this release, we have introduced a new hierarchical Document type classification for Awards called *Award Management: Award Document types*. The default values are:

- Award
- Agreement
- Finance

[Back to top of page](#) 

3.8. Unified Project Model: Submitter of applications

We have made it possible for the Submitter of applications to also be able to create new Applications.

To enable this functionality, go to *Administrator > Unified Project Model > Module configuration > Configure which roles are allowed to create content* and select the new option "Administrators, editors and submitters".

[Back to top of page](#) 

3.9. Unified Project Model: Negative budget values in Applications and Awards

We have made it possible to add negative budget values to Applications and Awards.

[Click here for more details ...](#)

Application

Add budget line with negative value

Organisation: Welfare studies, Organisational unit: Research group

Budget lines table:

Budget lines	Budget EUR	Remove line
Equipment	-1,000	Remove line

Budget overview

Budget (Financial overview)

Budget lines table:

Budget lines	Budget EUR
Equipment	-1,000.00
Total	-1,000.00

Difference between budget and applied amount: €3,000.00

Note: The Applied for amount subtracting the negative budget value results in a "Difference between budget and applied amount". This is due to the negative amount included in the budget that implies that an amount is being added to the budget.

Award

Edit budget line with negative value

Organisation: Welfare studies, Organisational unit: Research group

Budget lines table:

Budget lines	Budget EUR	Remove line
Equipment	-1,000	Remove line
Travel	-1,000	Remove line
Total	-2,000	

Overview of budget and expenditure

Fundings: Financial, Awarded amount: €2,000.00

Budget & expenditure (Financial overview)

Budget lines	Expenditure (EUR)				Budget remaining	
	Budget EUR	Earlier	This month	Total	EUR	%
Equipment	-1,000.00	0.00	0.00	0.00	-1,000.00	100%
Travel	-1,000.00	0.00	0.00	0.00	-1,000.00	100%
Total	-2,000.00	0.00	0.00	0.00	-2,000.00	100%

Difference between budget and awarded amount: €4,000.00

Note: The Awarded amount subtracting the negative budget value results in a "Difference between budget and awarded amount". This is due to the negative amount included in the budget that implies that an amount is being added alongside the awarded amount.

To enable ORCID as an import source for Research outputs, go to *Administrator > Research Output > Import sources > ORCID*.

ORCID

Enabled Test configuration Save Cancel ↑ ↓

ORCID

Enabled

ORCID client ID
The institution-specific identification ID provided by ORCID upon registering the institution.

0000-0003-0749-8537

Default:

ORCID client secret
The institution-specific secret key provided by ORCID upon registering the institution.

Default:

Enable automated ORCID ID search
Enable automated search for all active persons with a ORCID ID

DISABLED

If you have already enabled the [Export to ORCID functionality](#), we will pre-fill the configuration with your ORCID membership credentials and you only need to enable and save. You can of course also use different credentials, if you would like to (but there are no known benefits in Pure to doing so). The use of [Membership API credentials](#) or [Public API credentials](#) are supported. If you already have credentials, you can use those or follow the links provided to create new / additional credentials.

Pure will always read from ORCID's public API; all records marked in ORCID as viewable by [everyone](#) are available to import.

Note: It is only possible to search ORCID by the individual author's ORCID ID - this is the only search function supported by the ORCID API.

Interaction between import and export from/to ORCID

As Pure also provides functionality to export Research outputs to ORCID, in order to prevent the creation of duplicate records, Pure will not present as ORCID import candidates Research outputs that were originally exported from Pure. Given this, users may see fewer import candidates in Pure than there are total records available in ORCID.

In order to deliver this, we have improved the Export to ORCID functionality to include capturing the ORCID works ID on the Research output record in Pure. This enables Pure to identify records being exported to ORCID.

Accordingly, we **strongly encourage** you to export content to ORCID following upgrade to Pure 5.13.0, but before enabling import from ORCID. This will enable the capture of the ORCID works ID for each Output, preventing duplicates from being presented as import candidates.

To do this, run the 'Update ORCID With Pure Data Job' cron job, available at *Administrator > Jobs*:

Update ORCID With Pure Data Job

Scheduled for 20. Sep 2018 00:28.
Next run after that is 21. Sep 2018 00:28.

Start Job now

By default this job is set to run daily, so you do not necessarily have to initiate the job manually, but can wait for its normal cycle to run.

If you don't export content to ORCID, you can disregard this section.

Notes:

- A mapping of Pure Research output types to ORCID works types can be viewed [here](#).
- It is possible to enable automated ORCID ID search, as per the automated search feature introduced in [5.12.0](#). This is DISABLED by default, but can be easily enabled (see ORCID import source screenshot above).
- We have re-organised the Export to ORCID configuration screen under *Administrator > Integrations > ORCID*.

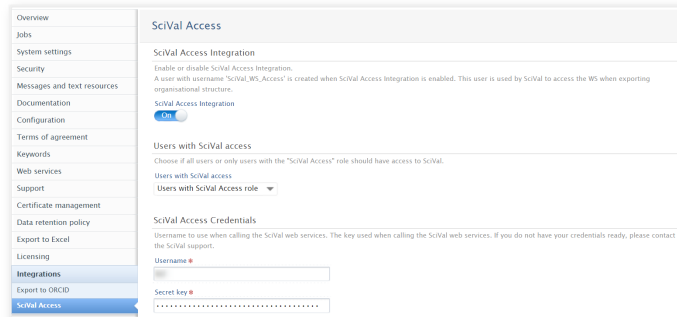

[Back to top of page](#) 

4.2. Espacenet: New API requires access credentials

[Espacenet](#) has released a new version of their API, which now requires the use of access credentials. All customers using Espacenet as an import source must upgrade to 5.12.2. Details are available in the [5.12.2 release notes](#).

4.3. SciVal Access: New user will be created when enabled

Enabling the SciVal Access integration will now create a user with the username 'SciVal_WS_Access'. This user will be used by SciVal to access the new web service API, if additional authentication is enabled. This user is locked if the Export to SciVal feature is disabled.

5. Pure Core: Web services

5.1. New Web Service: General Changes to POST calls

Major changes have been made to the POST body for all endpoints to ensure consistency between the XML and the JSON body structure. In addition, a POST body with the content type of **application/xml** is now validated against the web schema for the web service (can be found at https://_your_pure_server_ws/api/513/xsd/schema1.xsd).

[Click here for more details ..](#)

Example of a field that has had a wrapper element added to ensure consistency, for example UUIIDs

Before:

```
<?xml version="1.0"?>
<researchOutputsQuery>
  <uuids>a961a9ec-016b-4bc2-92d6-ea3bdf0580b0</uuids>
  <uuids>ba7fb9ab-cf89-4fb9-a4bf-9ebd5e97ec82</uuids>
  <uuids>4999ea8b-6bf0-4758-8678-3cb047fa369e</uuids>
</researchOutputsQuery>
```

After:

```
<?xml version="1.0"?>
<researchOutputsQuery>
  <uuids>
    <uuid>a961a9ec-016b-4bc2-92d6-ea3bdf0580b0</uuid>
    <uuid>ba7fb9ab-cf89-4fb9-a4bf-9ebd5e97ec82</uuid>
    <uuid>4999ea8b-6bf0-4758-8678-3cb047fa369e</uuid>
  </uuids>
</researchOutputsQuery>

5.2. New Web Service: Organisation Hierarchy added

A new call to the web service API `/organisational-units/{id}/hierarchy` has been added. This call exposes all Organisational unit IDs from the given ID on in the hierarchy specified in Pure.

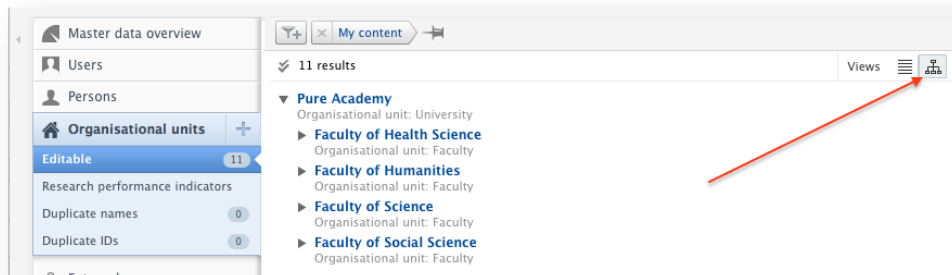

[Click here for more details ..](#)

There are two parameters relevant for this method:

<hierarchyDepth> Indicates how deep the query should look into the hierarchy. *Default value is 8.*

<hierarchyStrategy> Indicates what hierarchy to query after. The valid values are: (PARENTS,TAKEN_OVER). Default value is PARENTS.

- If the "PARENTS" hierarchy structure is selected, the output will resemble the view you can see in the hierarchy view of your Organisational units structure in Pure.

- If "TAKEN_OVER" is selected, the output will list all Organisational units taken over by the specified Organisational unit.

You can now also limit POST queries by your Organisational hierarchy. Where applicable, the POST queries have been expanded with the fields: **<hierarchyDepth>** and **<hierarchyStrategy>**.

[Back to top of page](#) 

5.3. New Web Service: Downloads Endpoint

A new endpoint ([/downloads/](#)) has been added that will allow you to query the web service API for download information (i.e information on downloaded files from Pure). This endpoint can be used to view a list of most downloaded Research outputs, Activities, etc.

[Click here for more details ..](#)

As usual POST & GET are supported for this method. Download counts can be retrieved per ID, to get a list of the supported content types please use [/downloads-meta/family](#).

Example response:

```
<download xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:schemaLocation="http://localhost:8080/ws/api/513/xsd/schema1.xsd">
  <pureId>3802906</pureId>
  <contentRef uuid="db67d9fb-4c7a-4353-8141-93b486d760db">
    <link ref="content" href="http://localhost:8080/ws/api/513/research-outputs/db67d9fb-4c7a-4353-8141-93b486d760db?apiKey=83d2d604-cfa2-4a04-bd5c-d013b9c1c913"/>
    <name>College 1</name>
    <type pureId="25739" uri="/dk/atira/pure/researchoutput/researchoutputtypes/bookanthology/book">Book</type>
  </contentRef>
  <downloadCount>1</downloadCount>
</download>
```

[Back to top of page](#) 

5.4. New Web Service - Award milestones

We have added a new endpoint to query for Award milestones. You will find the following new methods

- GET [/award-milestones](#) to retrieve the full list of award milestones
- POST [/award-milestones](#) to use additional filtering for advanced queries
- [/GET award-milestones/{id}](#) to retrieve a specific milestone by ID.

We have also added two methods to retrieve the available ordering and rendering options for Award milestones. Please find an example for the [/GET award-milestones/{id}](#) under details.

[Click here for more details ..](#)

Example of the of a query for an Award milestone with Pure ID 3801522:

```
<awardMilestone xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" uuid="1b7c31ff-0f14-4cff-b7b2-209e8a968bc2" pureId="3801522" xsi:schemaLocation="http://localhost:8080/ws/api/513/xsd/sch
  <milestoneDeadline>2018-06-30</milestoneDeadline>
  <completed>false</completed>
  <award uuid="1a62fc4c-9e42-411a-977d-63fc09c26d83">

```

[Back to top of page](#) 

5.5. New Web Service - Highlighted content calls added

We have added the ability to retrieve Highlighted content from Pure's web service API. For each content type that supports Highlighted content, you can find a new call under `/persons/{id}/_content_type_/highlighted`:

GET	<code>/persons/{id}/projects</code>	Lists projects on a person
GET	<code>/persons/{id}/projects/highlighted</code>	Lists highlighted projects on a person
GET	<code>/persons/{id}/research-outputs</code>	Lists research outputs on a person
GET	<code>/persons/{id}/research-outputs/highlighted</code>	Lists highlighted research outputs on a person
GET	<code>/persons/{id}/student-theses</code>	Lists student theses on a person
GET	<code>/persons/{id}/student-theses/highlighted</code>	Lists highlighted student theses on a person

The call will return content in the same format as for the other non-highlighted calls.

Note: This feature is currently only available to customers with the Pure Portal, as Highlighted Content is defined by the Portal feature introduced in Pure 5.10.0. In an upcoming release (currently planned for 5.14.0), we will expand this functionality to support Pure installations without the Pure Portal.

[Back to top of page](#) 

5.6. New Web Service - 'Content modified' added as filter option to endpoints

Previously, it was not possible to filter results based on when content was last modified. We have improved the filtering, so now you can find objects modified before a given date, after a given date, or within a period.

[Click here for more details ..](#)

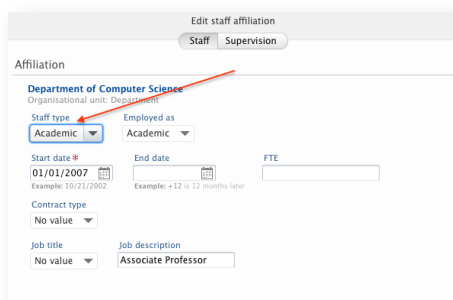

Please find an example below. The dates specified as parameters are inclusive, so the resulting list will include milestones that have been modified in the period 1 January 1980 to 1 January 2525.

```
<?xml version="1.0"?>
<awardMilestoneQuery>
  ...
  <modifiedAfter>1970-01-01T00:00:00.001Z</modifiedAfter>
  <modifiedBefore>2525-01-01T00:00:00.001Z</modifiedBefore>
  ...
</awardMilestoneQuery>
```

[Back to top of page](#) 

5.7. New Web Service - 'Academic' added as filter option to Persons endpoint

We have added a new filter that enables you to filter for Academic staff relations. This new filter exposes Persons with an Academic organizational affiliation.

[Click here for more details ..](#)

This filter accepts Boolean values as parameters:

```
<?xml version="1.0"?>
<personsQuery>
  ...
  <academicStaff>true</academicStaff>
  ...
</personsQuery>
```

[Back to top of page](#) 

5.8. New Web Service - Author roles filter for advanced queries

It is now possible to filter for author roles when querying for Research outputs in advanced queries (POST).

[Click here for more details ..](#)

When querying for Research outputs in a POST call, it is now possible to filter by the author role. You can use this new filter in combination with other filter options to form complex queries.

An example of the new filter in use:

```
<?xml version="1.0"?>
<researchOutputsQuery>
  ...
  <authorRoles>
    <authorRole>/dk/atira/pure/researchoutput/roles/memorandum/editor</authorRole>
  </authorRoles>
  ...
</researchOutputsQuery>
```

We have also added a new method to retrieve all the author roles available on your Pure installation and can be used as a filter value. They are displayed as classification URIs that can be used as a filter in POST/research-outputs.

[Back to top of page](#) 

5.9. New Web Service - Keyword filter for advanced queries

We have added the possibility to filter for Keywords in advanced queries (POST). This is available for all content types that support Keywords in Pure, and is available for both structured and free Keywords.

[Click here for more details ..](#)

An excerpt of a Research output query. The resulting list will only include Research outputs that have the structured Keyword '/dk/atira/pure/core/keywords/A/AC' and the free Keyword 'biofuel' assigned.

```
<?xml version="1.0"?>
<researchOutputsQuery>
  ...
  <keywordUri>
    <keywordUri>/dk/atira/pure/core/keywords/A/AC</keywordUri>
  </keywordUri>
  <freeKeywords>
    <freeKeyword>biofuel</freeKeyword>
  </freeKeywords>
  ...
</researchOutputsQuery>
```

[Back to top of page](#) 

5.10. New Web Service - Keyword structure on WS results changed

The display of free and structured Keywords has been improved, applying to all results that display one or more Keyword groups.

[Click here for more details ..](#)

Keywords are now separated into containers, where structured and free Keywords are bundled together if they are related. Free Keywords are further split into their individual locales for easier assessment.

```
...
<keywordGroups>
  <keywordGroup logicalName="keywordContainers" pureId="546373">
    <type uri="/dk/atira/pure/core/keywords" locale="da_DK"/>
    <type uri="/dk/atira/pure/core/keywords" locale="en_GB">Keywords</type>
  </keywordContainers>
```

```

<keywordContainer pureId="546374">
  <structuredKeyword uri="/dk/atira/pure/core/keywords/A/AC" disabled="false" pureId="1249">
    <terms>
      <term locale="en_GB">AC Collections. Series. Collected works</term>
    </terms>
    <descriptions>
      <description locale="en_GB">AC Collections. Series. Collected works</description>
    </descriptions>
  </structuredKeyword>
  <userDefined pureId="546375" locale="en_GB">
    <freeKeyword>UKKey1</freeKeyword>
    <freeKeyword>UKKey2</freeKeyword>
  </userDefined>
  <userDefined pureId="546376" locale="da_DK">
    <freeKeyword>DKKey1</freeKeyword>
    <freeKeyword>DKKey2</freeKeyword>
  </userDefined>
</keywordContainer>
...
</keywordGroup>
</keywordGroups>

```

[Back to top of page](#) 

5.11. New Web Service - Page information added for paging

The handling of paging and page size in web service responses has been improved. When paging is used, details are included in a new *pageInformation* section.

[Click here for more details](#) ..

Please find an example below, a query for 28 total objects with the result displaying the first ten (this is based on the size ten and offset zero).

```

<result xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance" xsi:schemaLocation="http://localhost:8080/ws/api/513/xsd/schema1.xsd">
  <count>28</count>
  <navigationLink ref="next" href="..."/>
  <pageInformation>
    <offset>0</offset>
    <size>10</size>
  </pageInformation>
  ...
</result>

```

[Back to top of page](#) 

5.12. New Web Service - Links to PDF files added to Curriculum Vitae endpoint

The Curriculum Vitae endpoint will now include links to PDF versions of CVs.

[Click here for more details ..](#)

An example of the link:

```
<pdfURLs>
  <pdfURL locale="en_GB" href="http://localhost:8080/ws/cv/export?id=3801844&locale=en_GB"/>
</pdfURLs>
```

[Back to top of page](#) 

5.13. New Web Service - Supported added for 'pretty' URL links

We have added support to also expose 'pretty' URLs (less complex and shorter URLs for Pure Portal content). These are available to Pure installations with a Pure Portal only and will only be exposed where available.

[Click here for more details ..](#)

A pretty URL for a person's profile page on the Pure Portal could look like

```
https://portal.com/persons/personName(44055370-9c2e-11db-8ed6-000ea68e967b).html
```

While a prettyURL can look like this:

```
https://portal.com/persons/person
```

An example of the pretty URL structure:

```
<info>
  ...
  <prettyURLs>
    <prettyURL>https://portal.com/persons/person</prettyURL>
    <prettyURL>https://person.com</prettyURL>
  </prettyURLs>
  ...
</info>
```

[Back to top of page](#) 

5.14. New Web Service - Support added for Court cases added to research output

We have added support to expose the new Court case metadata fields for Research outputs (see [above](#)).

[Click here for more details ..](#)

Available metadata for Court cases includes: Court name, Judgement date, Case identifier(s), and Court case titles.

An example of the XML structure is shown below:

```
<courtCases>
  <courtCase pureId="[ID]">
    <court uuid="[court_external_ID]">
      <link ref="content" href="[link_text]"/>
      <name>[Court name]</name>
      <type pureId="[ID]" uri="/dk/atira/pure/ueoexternalorganisation/ueoexternalorganisationtypes/ueoexternalorganisation/court">Court</type>
```

```
</court>
<title>[Court case title]</title>
<judgementDate>[Judgement date]</judgementDate>
<ids>
  <id pureId="[ID]" typeUri="/dk/atira/pure/courtcase/sources/ecliid" type="ECLI ID">[ECLI number]</id>
  <id pureId="[ID]" typeUri="/dk/atira/pure/courtcase/sources/casenum" type="Case number">[Case number]</id>
</ids>
</courtCase>
<courtCase >
... if multiple court cases ...
</courtCase>
</courtCases>
```

[Back to top of page](#) 

5.15. New Web Service - Improved ordering options

We have added a new 'orderBy' parameter to a number of our calls, allowing additional ways of ordering responses. If a sort order is selected in web service calls, the result is ordered ascending by default; with this new parameter, you can now explicitly select descending or ascending order.

[Click here for more details ..](#)

Examples of the new parameter in use (note, without API keys):

An example without the new parameter, this defaults to ascending:

```
localhost:8080/ws/api/513/datasets?order=dateAvailable
```

An example of the new orderBy parameter with descending order:

```
localhost:8080/ws/api/513/datasets?order=dateAvailable&orderBy=descending
```

An example of the new with parameter with ascending order explicitly set:

```
localhost:8080/ws/api/513/datasets?order=dateAvailable&orderBy=ascending
```

[Back to top of page](#) 

5.16. New Web Service - Change in Activities endpoint

We changed the XML structure for Activities that are associated to either an Organisational unit or an External organisation in order to correct an issue in the JSON output format, where associated content was missing. The tag for an associated Organisational unit has been renamed from <organisationalUnit> to <associatedOrganisationalUnit> and for associated External organisation from <externalOrganisation> to <associatedExternalOrganisation>.

[Back to top of page](#) 

5.17. New Web Service - Planned name change of order options on Research output for 5.14.0

We want to improve some of the naming of the available order strategies on the Research output endpoint as there are some cases where the current names are not sufficiently precise. We will inform you in the 5.14.0 release notes with exact details of the changes; you may need to make minor modifications to your existing queries.

[Back to top of page](#) 

6. Reporting

6.1. Technology preview of new Reporting module

Following the [release of the technology preview of the new Reporting module in 5.9.0](#), and updates to this preview in subsequent releases ([5.9.2](#), [5.9.3](#), [5.10.0](#), [5.10.1](#), [5.11.1](#), and [5.12.0](#)) we are continuing to develop the new Reporting module in order to deliver a comprehensive, flexible, and intuitive reporting tool that continues to meet users' evolving reporting needs. New features included in this release are:

- New content types
- Sharing
- Filtering improvements

6.1.1. Terminology

With this release, we have introduced a new term in the Reporting module: **Workspace**. A workspace incorporates both the Data table and its associated Data story (where one has been created). We've introduced this new concept of a 'workspace' in order to more accurately reflect the dynamic nature of what is being created - and to reflect the planned future direction of reporting in Pure.

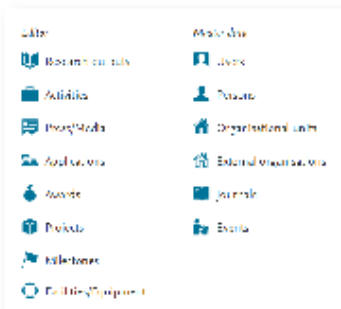

[Back to top of page](#) 

6.1.2. Additional content types

The following additional content types are now available in the new Reporting module, with associated filters and the ability to create data stories incorporating these data:

- Applications (Unified Project Model only)
- Awards (Unified Project Model only)
- Projects (Unified Project Model only)
- Milestones
- External organisations
- Activities
- Press/Media
- Facilities/Equipment
- Users
- Events

In upcoming releases, we will continue to expand the content types available in the new Reporting module, along with enhancing reporting capabilities (particularly filtering and aggregation strategies) for existing content types.

[Back to top of page](#)

6.1.3. Sharing

This release includes the first phase of Sharing functionality, which enables users to share their workspaces with colleagues.

[Click here for more details ..](#)

In this first phase of Sharing functionality, we have delivered two distinct functions:

- Share a workspace with all users who have access to the workspace's content (Administrators only)
- Share a workspace with selected Pure users

Pure Report University of Manchester TECHNOLOGY PREVIEW

Share workspace

By sharing, other users will be able to view this workspace. Should they wish to make any revisions, they can make their own local copy. When sharing with named users, they will be notified by email.

You can only share with users who have reporting access to the content types included in this workspace.

Search and add users to share with

All who have access

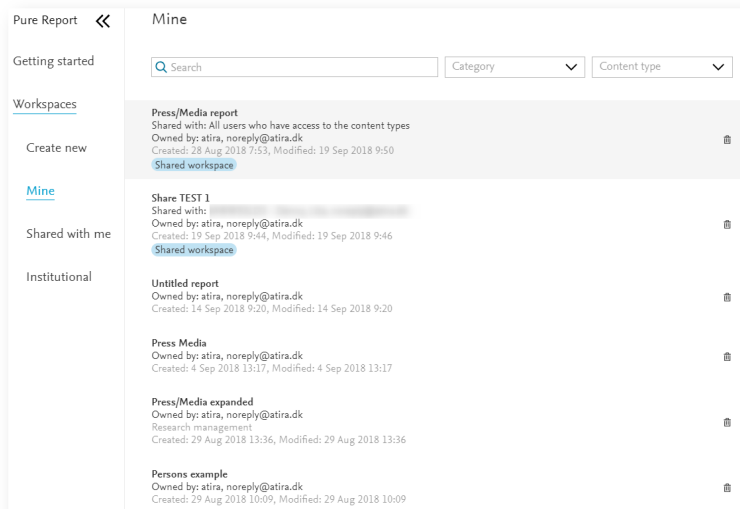

Share with all users who have access to the content types

Users who have access to the content types

- [User Name]
- [User Name]
- [User Name]
- [User Name]
- [User Name]
- [User Name]
- [User Name]
- [User Name]

Sharing a workspace means that the recipient is able to view, but not edit the workspace. If a recipient would like to modify the workspace, they can create a copy and save a local version.

Shared workspaces are tagged as such in your list of saved workspaces.

Navigation within the module has been updated to help users find shared workspaces. When an Administrator shares a workspace with all users, these are available to users under the 'Institutional' branch. When a user shares a workspace with named Pure users, these are available to the recipient under the 'Shared with me' branch.

To 'un-share' a report, you can either simply delete it (as the creator) or remove the selected recipients, via the Share function.

In upcoming releases, we plan to build on sharing functionality to support additional features such as sharing a static report outcome with selected individuals, and scheduling the generation of a report for dissemination to selected individuals.

6.1.4. Filtering

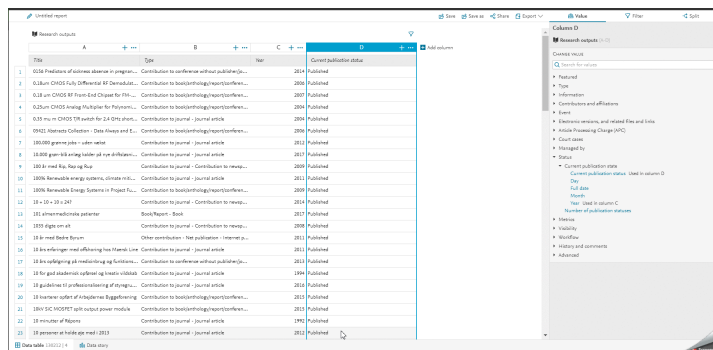

We have made some improvements to filtering functionality in this release:

- facility to save a group of filters and have them available for future use.
- easier to see what filters have been applied to a series.

[Click here for more details](#) ..

Preset filters

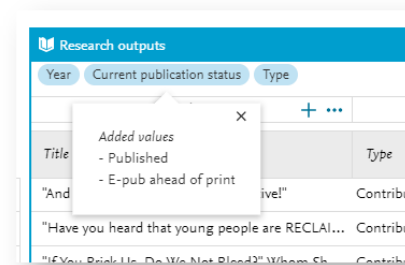

We have introduced 'Saved filters' functionality that enables you to save commonly used filters and/or combinations of filters and have them available for future use.

Display improvements

This release includes improvements to the filtering function that make it easier to see what filters have been applied to a series.

6.1.6. Tips and Feedback functions

With this release we have removed the Tips function from the Reporting Technology Preview. In upcoming releases we plan to improve the onboarding experience by offering short videos demonstrating particular elements of functionality, to help users navigate through and use the new features.

We have also removed the Feedback function. This in no way means that we are not interested in your feedback! We would rather, however, at this stage in the development of the new Reporting module, to capture your feedback via JIRA, in line with feedback on all other Pure functionality. Please do continue to provide your feedback on the new Reporting module via JIRA.

[Back to top of page](#) 

6.1.7. Pure Academy classes

A [Pure Academy](#) class was held in July covering all functionality in the new Reporting module so far, our development approach, and upcoming plans. A recording of the class is available [here](#).

A Pure Academy class for the new Reporting module developments in 5.13 will be held on 17 October (will be recorded). You can register [here](#).

[Back to top of page](#) 

6.2. FAAR (Faculty and Academic Activity Reporting) enhancements

This release includes enhancements to Faculty and Academic Activity Reporting (FAAR), in response to customer feedback. These enhancements include:

- Introduction of Press/Media content
- Re-working of Courses to include affiliations based on Course occurrences, rather than by affiliations based on Course development
- Summary tables for each content type in the FAAR report
- Updated period filters for all content types to ensure that all 'active' content is included in the FAAR report for the selected period (not just those that started or ended in the selected period)

7. Pure Portal

7.1. Portal update status overview

We regularly hear from our users that the Pure Portal configuration and content update process can be confusing and that it should be easier to identify what updates are in progress and when changes will go live. To this end, we have worked extensively this release on making this possible.

These changes affect **ALL** Portal customers, including Pure Portals, Custom Portals, and Standard Portals, and are visible to Administrator users only.

[Click here for more details ..](#)

Our Portal update process works as follows:

- Changes are collected into batches of updates, which are processed together.
- While one batch is being processed, all new changes that occur are collated into a second batch.
- This batch will continue to build up until the previous update is complete. Once the previous update is complete, the next batch is processed.

For Pure Portal customers, the new 'Update overview' can be accessed via *Administrator > Pure Portal*. The location will vary for Custom/Generic Portal customers - please let the Support Team know if you have any problems locating it.

The 'Update status overview' is broken down into two major sections.

- 'Update in progress'
- Update 'Log'

BFI | Dashboard | Administrator | Usage analytics

Update in progress

This shows the current progress of the application of the changes in the current update batch.

It displays the number of items in the batch out of the remaining total. The progress bar shows the percentage completion for the batch, based on estimates of how long each content type takes to update.

Update log

Update log

The update log shows a summary of the most recent Portal updates (max. 10).

By checking the start time of the current update in progress, you can get an idea of whether your recent changes should be in that batch, or are in the queued batch. Any changes you make after the start time of the current update in progress begins will go into the queued batch. We are unable to give detailed information on the full estimated time before new changes are live on the Portal, but this should give you a rough idea.

The timezone for start times is based on the timezone your system runs on. For locally hosted Pure systems, this will be your local timezone, that you have set for your Pure instance. For customers that we host in Amazon (the integrated version), the timezone is set to the your local timezone. For customers that we host fully in Amazon, the timezone will be set automatically to UTC and unfortunately cannot be changed. This is due to technical limitations currently and we apologise for the inconvenience. We may be able to resolve this at a later date.

The 'Details' column shows a more precise breakdown of the items included in the individual batch. You can see the content types included, and the total number of items of each content type. If there are more items than we can show in the table row, you can click 'Show more' for an expanded overview:

7.2. Portal use of upgraded web service API

As first announced with our [Pure 5.9.0](#) release (June 2017), we are switching to an upgraded web service API for the Pure Portals as of this current release. As such, we have completed the necessary work to prepare Pure Portals for the switch. We expect the upgraded web service to result in overall greater stability and performance. We also now have clearer documentation, with a more consistent, versatile platform.

[Back to top of page](#)

8. Awards Management

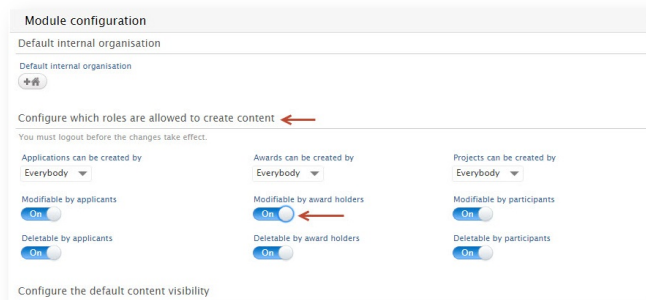

8.1. Milestones accessible throughout workflow

Once an Award has been created in Pure, and during the lifecycle of the Award (including after the content in the Award record has been validated), it is necessary to be able to edit Award milestones in order to manage and track the ongoing process of the Award. In order to facilitate this, we have made it possible for:

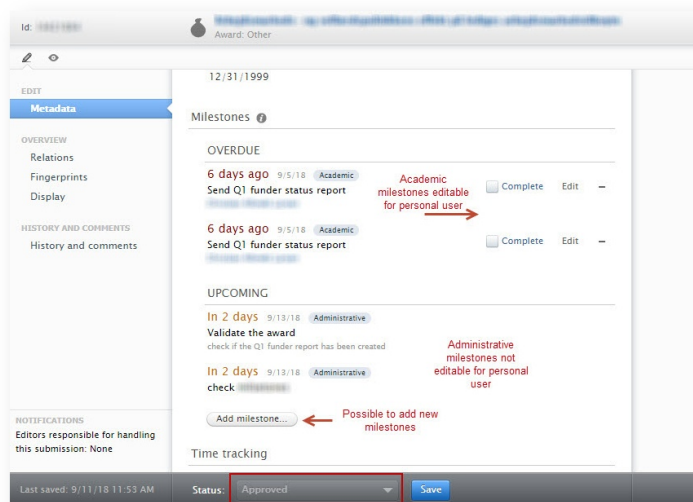

- Personal users to edit and create milestones on Awards in the Waiting for approval, Approved, and Validated workflow states.
- Editors of Awards to be able to edit and create milestones on Awards in the Validated workflow state.

[Click here for more details ..](#)

Before enabling this function, ensure that Award holders are enabled to modify Awards even if they have not created them. Go to *Administrator > Unified Project Model > Module configuration > Configure which roles are allowed to create content*. Enable the 'Modifiable by award holders' setting (it is not necessary for the 'Awards to be created by' setting to be set to 'Everybody').

The screenshot below shows how Award milestones are active in the Personal user's read-only view:

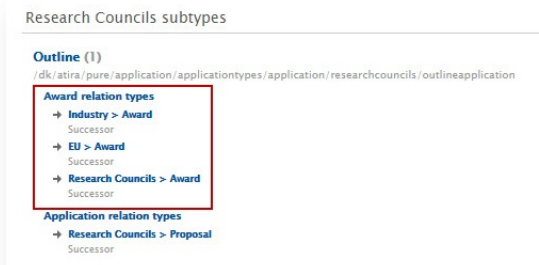

8.2. Update to management of Application, Award, and Project subtypes

In 5.12.0 we made it possible for administrators to [manage Application, Award, and Projects subtypes](#) and the [relations between them](#). Building on this functionality, in this 5.13.0 release Pure now enforces relations created by the Administrator on the subtype level when deriving an Application, Award, or Project. The selections available in the derived Application, Award, or Project are now limited to the allowed subtypes, based on the managed relations.

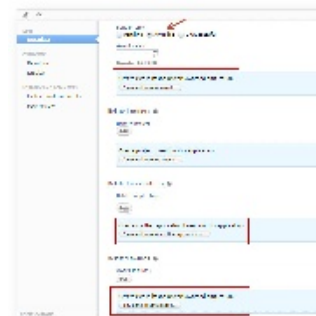

[Click here for more details ..](#)

A worked example

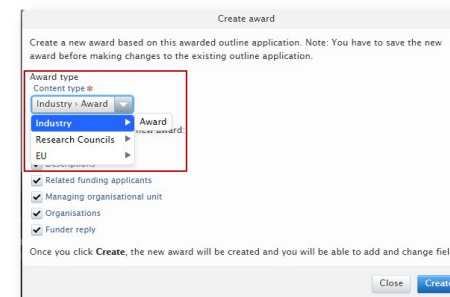

The Administrator has created 3 new relations between the Outline Application subtype and the Industry, EU, and Research Council Award subtypes (identified as successors).

When the Application has been successful and marked as such, it is possible to create an Award or Application from the current Application (if a successor relation exists between the current Application subtype and another Application subtype).

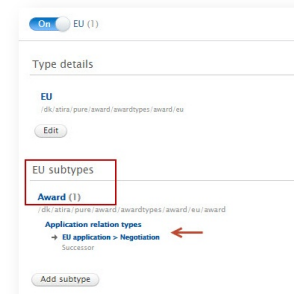

If you choose to create an Award from the successful Application, you can select the appropriate content type of the Award from the list of Award subtypes that are identified as successors to the Outline Application subtype.

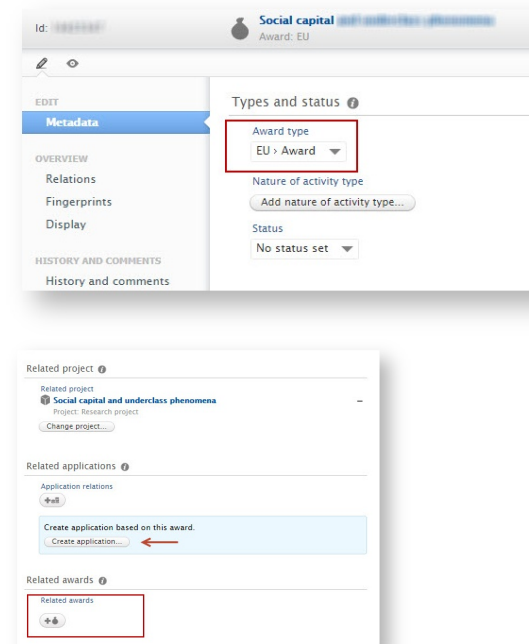

A worked example

Remember that the facility to create a new Award, Application, or Project from the current Application, Award, or Project is only displayed when there are 'successor' relationships identified.

For example, here the Administrator has created one Application successor to the EU Award subtype.

As per the example given above, in an EU Award, you are only presented with an option to create a new Application from the Award. The user cannot create a new Award as there is no successor relationship created to another Award subtype.

[Back to top of page](#) 

8.3. Tabular view now available for Personal users

Prior to this release, Personal users were only able to view Awards management content in the List or Matrix views. This release brings the ability for Personal users to view their data in Tabular view. To access Tabular view, users need to click on the Tabular view icon when viewing the list / matrix of Awards management content.

Award	IDs	Nature of activity	Funder	Awarded	Spend	Funded period	Award date	Allocated time (h)	Spend time (h)	Documents	Overdue milestones	Upcoming milestones	Applications	Project
...

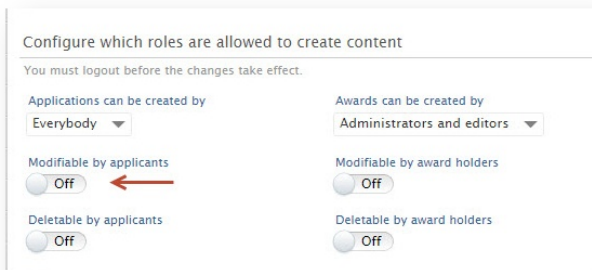

[Back to top of page](#)

8.4. Applicants can request peer review when in read-only mode

With this new release, applicants who do not have the right to modify Applications can now request Peer review and add a document, while the remainder of the Application remains read-only.

[Click here for more details ..](#)

This applies to Personal users who are not able to modify Applications on which they are applicants (this is defined by the setting *Administrator > Unified Project Model > Configure which roles are allowed to create content*):

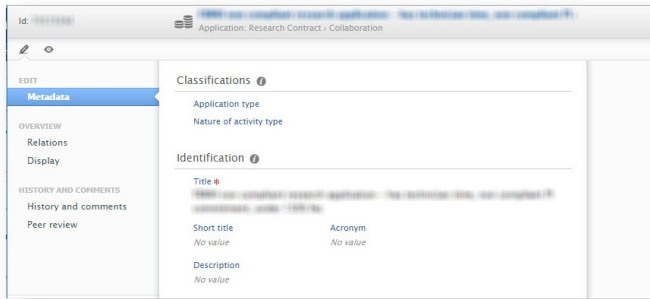

It is now possible to make Peer review functionality available to applicants who are unable to modify Applications. This is done via the setting *Administrator > Award Management > Application peer review > Make peer review accessible, if applicants are not allowed to edit applications on which they are an applicant*:

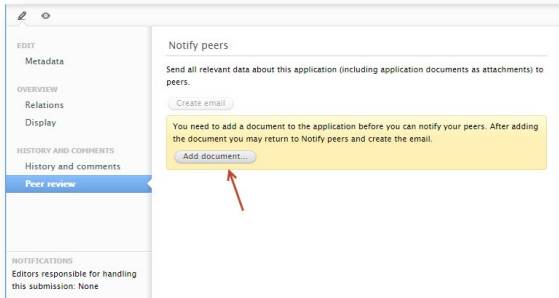

Steps for the applicant to request Peer review

When the applicant accesses an Application which they do not have the right to modify, it will be opened in read-only mode:

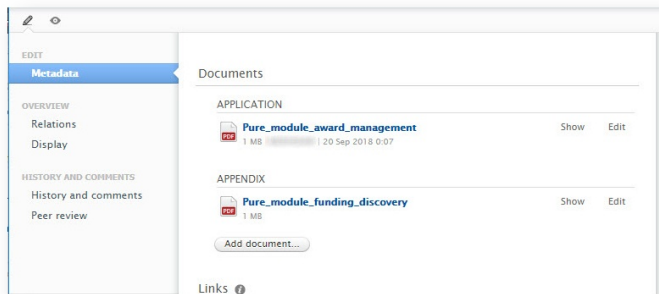

The applicant can then click on the Peer review tab of the Application editor window. If there are no documents in the Application, the applicant can add a document.

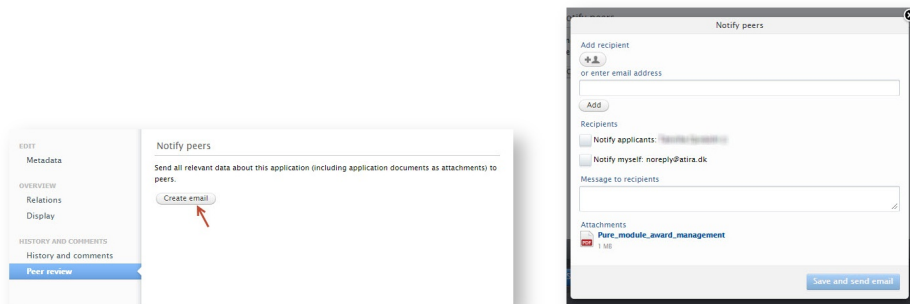

If there is already a document in the Application, and the applicant wants to add a new document for the Peer review request, the applicant can click directly to the metadata tab and add a new document to the Application.

Note: The applicant can only add documents, not delete them.

Once a document is added, the applicant can choose to create emails to invite others to review the document.

[Back to top of page](#) 

9. Funding discovery

9.1. Upgrade of Funding Discovery module

This release includes upgrades to the underlying service that is used to provide funding opportunities through the Funding Discovery module, one effect of which is more timely updating of funding opportunities.

Additionally, the new service includes:

- Improvements to the formatting of the opportunities received, resulting in more data visible on the opportunities and an enhanced ability to search over these fields.
- Updated fingerprinting, resulting in better fingerprint results on funding opportunities.
- Improvements to search behavior.

[Click here for more details ...](#)

Search behaviour in the Funding Discovery module has been improved, in particular:

- Acronym search.
- AND/OR search functions.

Aconyms

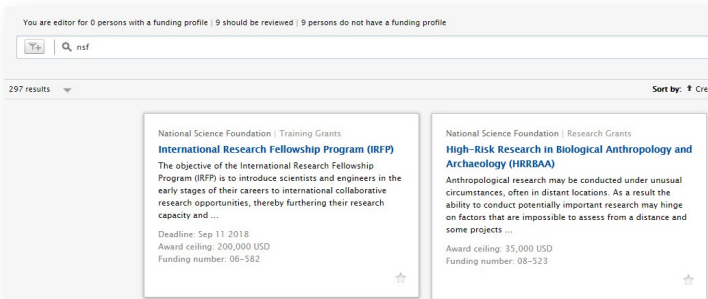

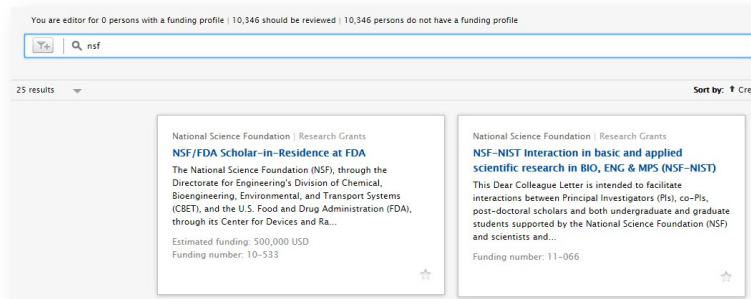

Previously, searching for acronyms in the Funding Discovery module would return only opportunities where the acronym was included in the full text of the opportunity, and would not find results where the name was included in full. The search has been improved to find results where the name of the funder is associated with an acronym in the record.

For example:

Old search result: Searching for NSF returns 25 results.

New search result: Searching for NSF returns 297 results.
Result includes child organizations related to NSF

Aconyms

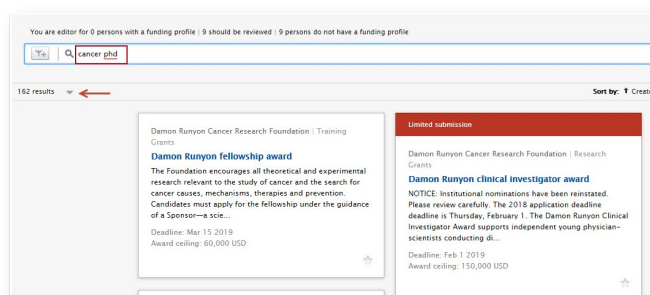

AND/OR search improvements

In **free text search**, when adding more search terms, the search now searches for all terms together (e.g. search term 1 **AND** search term 2), thereby narrowing the search result down, where it previously treated each term separately.

Old search result

New search result

Searching by **Funding body** now treats each Funding body separately (e.g. funding body 1 **OR** funding body 2), where previously the search attempted to narrow the results by searching for opportunities where all selected Funding bodies were present.

Search result for one Funding body: Wellcome Trust

Search result for one Funding body: Dunhill Medical trust

Search result for both Funding bodies: Wellcome Trust OR Dunhill Medical Trust

Aconyms

AND/OR search improvements

The screenshots illustrate the 'AND/OR search improvements' in the Funding Discovery module. The top-left screenshot shows a search for 'Wellcome Trust | Training Grants' with 50 results. The top-right screenshot shows a search for 'Dunhill Medical Trust' with 8 results. The bottom-right screenshot shows a search for 'Wellcome Trust | Training Grants' with 38 results. Each screenshot includes a search bar, a 'Funding body' filter, and a search button. The results are displayed in a list format with a star icon for each item.

Customers using the Funding Discovery module are requested to upgrade their Java 1.8 version to version 1.8.0_162-b12 or newer. Older versions cause SSL errors (SSL handshake failure from the secure HTTPS connection made from Pure to the Pure funding service).

[Back to top of page](#) 

10. Country-specific features

10.1. UK: REF2021: Phase 2

In this release, we have made a number of updates in the REF module relating to Open Access compliance functionality.

10.1.1. REF OA compliance monitoring: Updates due to confirmation of final policy

With the publication of the [REF2021 Decisions on staff and outputs](#), we now have confirmation that the policy will require outputs to be deposited no later than 3 months after the date of **acceptance** from 1 April 2018. Outputs accepted between 1 April 2016 and 31 March 2018 (inclusive) require outputs to be deposited no later than 3 months after the date of **publication**. Pure's REF OA compliance monitoring has therefore been updated to monitor against Publication date for outputs accepted between 1 April 2016 and 31 March 2018. Outputs accepted on or after 1 April 2018 will continue to be monitored against the acceptance date.

[Click here for details on the updates made ...](#)

In implementing the final REF OA policy in Pure, we have made the following changes:

- Updated the Research Output editor to indicate which 'phase' of the policy applies to the output.
- Removed the configuration to set the date upon which to start monitoring OA compliance.

- Added an additional 'No full publication date input' status.

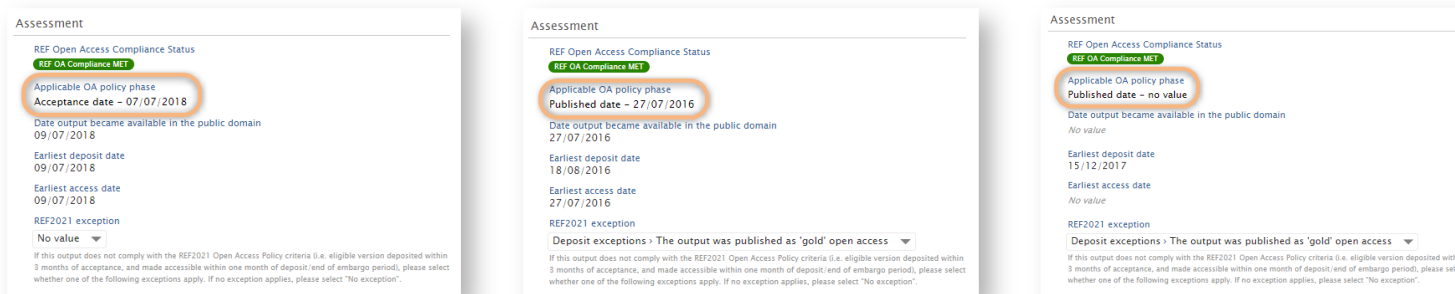

Updated Research Output editor to indicate applicable REF OA policy 'phase'

The 'Assessment' section of the Research Output editor has been updated to include a new 'Applicable OA policy phase' field that indicates which 'phase' of the REF OA policy applies to the output:

- Published date: Earliest of ePub ahead of print or Published date date is between 1 April 2016 and 31 March 2018 (inclusive), and therefore deposit must be made within 3 months of the date of publication.
- Acceptance date: Acceptance date is between 1 April 2018 and 31 December 2020 (inclusive), and therefore deposit must be made within 3 months of the date of acceptance.

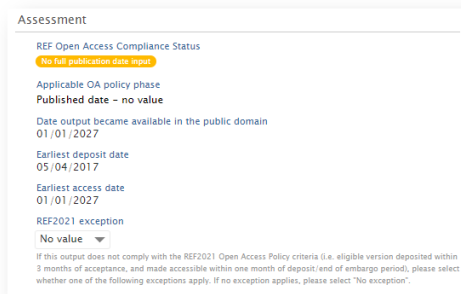

The date displayed adheres to the following logic:

- Published date
 - Date displayed is ePub ahead of print date, or if empty, the Published date.
 - If neither is available, 'no value' is displayed.
 - Where no day is input, '1' will be displayed for the day; where no month is input, '1' will be displayed for the month (so an output with a Publication date of just 2017 will be cited here as 01/01/2017).
- Acceptance date
 - Date displayed is Accepted/In press date

New 'No full publication date input' status

Outputs in the 'Published date' phase of the REF OA policy require the full Publication date (either ePub ahead of Print or Published) in order to accurately monitor compliance with the REF OA policy. Accordingly, we have introduced a new REF OA Compliance status that flags up these Outputs.

This status will be generated when:

- Acceptance date is between 1 April 2016 and 31 March 2018 (inclusive)

AND

- ePub ahead of print is populated, but incomplete, OR
- ePub ahead of print is not populated, but Published is populated but incomplete, OR
- neither ePub ahead of print nor Published is populated

Once either the full ePub ahead of print date or the full Publication date are provided, the REF OA Compliance Status will be updated to indicate compliance / not against the relevant policy requirements.

'REF2021 OA compliance start date' configuration removed

Prior to 5.13, it was possible for you to set the date upon which to start monitoring REF OA compliance, using the 'REF2021 OA compliance start date' configuration. With the now confirmed policy requirements and the increased complexity of the REF OA compliance logic, we have removed this configuration. REF OA compliance will always be monitored from 1 April 2016, as per the policy requirements. If, prior to upgrade, your configuration was set to monitor REF OA compliance prior to 1 April 2016, any outputs with an Acceptance date prior to 1 April 2016 will have their REF OA compliance data removed.

REF OA compliance end date introduced

We have introduced a policy end date of 31 December 2020 when monitoring REF OA compliance. This will ensure that when monitoring overall compliance with the REF2021 OA policy, only those outputs subject to the policy will be included.

Exceptions

The [Draft guidance on submissions](#) outlines the allowable REF OA exceptions. You should note the following:

- The draft guidance includes the 'Deposited within 3 months of publication' as a 'Further' exception. But Pure holds this as a 'Deposit' exception. This will have no impact on the exception returned in the submission.
- The draft guidance no longer includes the 'The output was published as 'gold' open access (which was introduced in the July 2015 update of the [REF OA policy](#)). Instead, it appears as though such outputs do not need to be specifically flagged, and are to simply be returned as 'Compliant'. Pure retains this as an exception. At the point of generating the submission XML file, we will ignore this exception value and simply return the status of 'Compliant'.

Further details are available in the [REF2021 wiki](#).

[Click here for details on what happens to your existing data upon upgrade to 5.13.0 ...](#)

When you upgrade to 5.13.0, Pure will apply the updated policy rules to existing data, and will migrate existing content, where appropriate:

- Removal of 'Deposit on publication requirement met' exception where no longer relevant.
- Application of updated policy to all other applicable outputs.

 **In order to ensure as little fluctuation in your REF OA Compliance reporting as possible, you may wish to ensure that prior to upgrade, the full ePub ahead of print or Published date is input for all outputs with Accepted / In press dates between 1 April 2016 and 31 March 2018 (inclusive)**

Application of updated policy to all other applicable outputs

Application of updated policy to all other applicable outputs

Upon upgrade to 5.13.0, Pure will run through all existing Research Output records and apply the updated REF OA policy rules. Accordingly, you may see REF OA compliance status changes for outputs in the Publication date phase. All outputs with an existing REF OA Compliance Status are listed in a log, accessible by the Administrator:

- Go to Master data > File handles > REF2021 OA migration 1/2: "Update Applicable Policy", and download the attached Excel file.

- The file lists all Outputs with an existing REF OA Compliance Status, and shows what the REF OA Compliance Status was prior to upgrade, and following upgrade.

Content ID	REF OA Compliance status before	REF OA Compliance status after
60961841	REF OA Compliance MET	No full publication date input
60289280	REF OA Compliance NOT MET - Confirm exception applicability	REF OA Compliance NOT MET - Confirm exception applicability
58077577	REF OA Compliance MET	REF OA Compliance MET
58766979	REF OA Compliance NOT MET - Confirm exception applicability	No full publication date input
40943556	REF OA Compliance MET	REF OA Compliance MET
60643074	REF OA Compliance NOT MET - Confirm exception applicability	REF OA Compliance NOT MET - Confirm exception applicability
56624010	REF OA Compliance MET	REF OA Compliance MET
36108127	REF OA Compliance MET	REF OA Compliance MET
48890112	REF OA Compliance MET	REF OA Compliance MET
53803642	REF OA Compliance MET	REF OA Compliance MET
53067403	REF OA Compliance MET	REF OA Compliance MET
59162034	REF OA Compliance MET	REF OA Compliance MET
60926839	REF OA Compliance MET	REF OA Compliance MET
58243968	REF OA Compliance NOT MET - Confirm exception applicability	REF OA Compliance NOT MET - Confirm exception applicability
60676160	REF OA Compliance MET	REF OA Compliance MET
48511043	Not eligible	Not eligible
59766268	REF OA Compliance MET	No full publication date input
60007237	REF OA Compliance MET	No full publication date input

Why has the REF OA Compliance status changed?

- The REF OA Compliance status may change once the updated policy has been applied if the output is in the Publication date phase of the policy:
 - If insufficient publication date information is available on the Output, the REF OA Compliance Status will change to 'No full publication date input' (see above).
 - If the output previously did not meet the Acceptance date deposit requirement, but meets the Publication date deposit requirement, the status will change accordingly.

Note that those outputs included in the second 'Deposit on publication requirement met' migration (see details below) may have their REF OA compliance status updated again as per the logic of that migration.

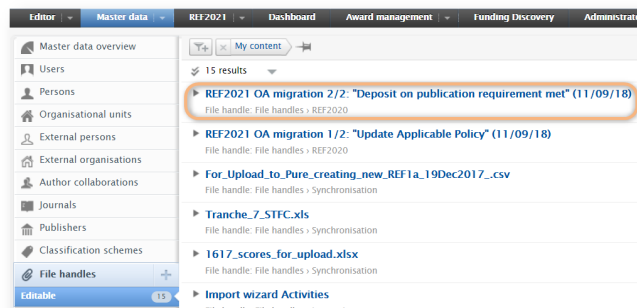

Removal of 'Deposit on publication requirement met' exception where no longer relevant

As described in the [5.7 Release notes](#), it has always been our intention to remove the 'Deposit on publication requirement met' exception for all those outputs in the **Publication** date phase of the policy (i.e. Acceptance date is between 1 April 2016 and 31 March 2018 (inclusive)) once the final policy was known and applied in Pure. Accordingly, the following will take place upon upgrade to 5.13.0.

Publication date phase

- Where the 'Deposit on publication requirement met' exception has been selected, and the output falls in the **Publication** date phase of the policy (i.e. Acceptance date is on or before 31 March 2018), upon upgrade this exception is **removed** and the REF OA Compliance status is re-calculated based on the updated logic
- All affected Outputs are listed in a log, accessible by the Administrator:
 - Go to Master data > File handles > REF2021 OA migration 2/2: "Deposit on publication requirement met", and download the attached excel file.

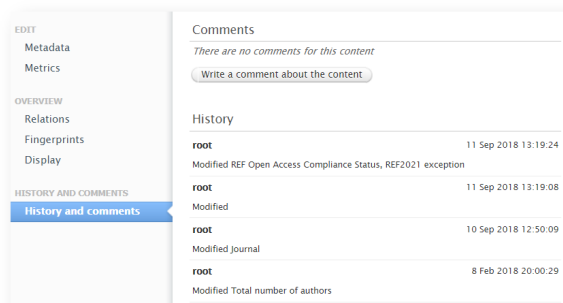

Removal of 'Deposit on publication requirement met' exception where no longer relevant

- The file lists all outputs where the 'Deposit on publication requirement met' exception has been removed, and shows what the REF OA Compliance Status was of the Output prior to upgrade, and following upgrade

Content ID	REF OA Compliance status before	REF OA Compliance status after
31960241	REF OA Compliance MET	REF OA Compliance NOT MET - Confirm exception applicability
48474661	REF OA Compliance MET	REF OA Compliance NOT MET - Confirm exception applicability
45822300	REF OA Compliance MET	REF OA Compliance MET
47103023	REF OA Compliance MET	REF OA Compliance NOT MET - Confirm exception applicability
50857135	REF OA Compliance MET	REF OA Compliance NOT MET - Confirm exception applicability
33720590	REF OA Compliance MET	REF OA Compliance MET
37049450	REF OA Compliance MET	REF OA Compliance MET
36055135	REF OA Compliance MET	REF OA Compliance NOT MET - Confirm exception applicability
40850367	REF OA Compliance MET	REF OA Compliance MET
51175045	REF OA Compliance MET	REF OA Compliance MET

- Why has the REF OA Compliance status changed?**
 - If the 'Deposit on publication requirement met' exception had been applied correctly and indeed the electronic version was deposited within 3 months of Publication, then the output should remain 'Compliant'
 - However, if this exception had not been applied correctly, and indeed the electronic version was **not** deposited within 3 months of Publication, when Pure runs the updated logic (described above), the output's REF OA Compliance Status will change to 'NOT compliant - confirm exception applicability'
 - Further, if insufficient publication date information is available on the Output, the REF OA Compliance Status will change to 'No full publication date input'
- Additionally, the History of all affected outputs is updated with an entry to indicate that the REF OA compliance status and REF2021 exception have been modified.

Acceptance date phase

- Where the 'Deposit on publication requirement met' exception has been selected, and the output falls in the **Acceptance** date phase of the policy (i.e. Acceptance date is on or after 1 April 2018), upon upgrade this exception is **retained**

Further details are available in the [REF2021 wiki](#).

10.1.2. REF OA monitoring: Summary screen updates

We have made a number of updates to the REF OA Monitoring screens:

- New 'Potentially subject to policy' column in the **Overall compliance summary screen**, identifying outputs where no full Acceptance date has been input and therefore are *potentially* subject to the REF OA policy.
- New 'No full publication date set' column in the **Overall compliance summary screen**, identifying outputs in the 'Publication date' phase where no complete publication date has been input.
- New hierarchical layout and grouping options for both REF OA monitoring screens.
- New grouping option by UoA of the associated REF2s.

[Click here for more details ...](#)

New 'Potentially subject to policy' column

As described in the [REF2021 wiki](#), a full Acceptance date must be input for Pure to monitor REF OA compliance – if only a year or year+month is input, REF OA compliance will not be monitored. In order to help you identify outputs that might potentially 'fall through the cracks' as the full Acceptance date has not been input, the **REF OA monitoring: Overall compliance summary screen** has been updated to include a column identifying outputs that are 'Potentially subject to the policy'.

The new 'Potentially subject to policy' column uses the following logic:

- Output type:
 - Contribution to journal
 - Contribution to specialist publication
 - Chapter in Book/Report/Conference proceeding > Conference contribution
- Publication states and dates:
 - Acceptance date is null OR incomplete (and in that case between 2016 and 2020 (inclusive)) AND
 - At least one of the Acceptance, ePub, or Published dates are between 2016 and 2020 (inclusive)

So, for example, the following output publication states and dates would be captured in this column:

- Output A
 - ePub ahead of Print = 23 July 2017
 - Published = 2017
- Output B
 - Accepted / In press = February 2016
- Output C
 - Published = 2019

Once the full Acceptance date has been input, the output will be removed from the 'Potentially subject to policy' column.

Name	Potentially subject to policy	Outputs subject to policy	No full publication date set	Indeterminate	Compliant	Compliant (exception applies)	NOT compliant - confirm exception applicability	Not REF eligible	Compliance rate	Exception rate
	29	62	13	1	33	11	2	2	71%	25%
	3	4	2	0	2	0	0	0	50%	0%
	2	1	0	0	1	0	0	0	100%	0%
	0	1	1	0	0	0	0	0	0%	0%
	36	236	2	0	20	212	1	1	98%	91%
	6	10	1	0	5	0	1	3	50%	0%
	0	1	1	0	0	0	0	0	0%	0%
	11	24	7	0	7	8	2	0	63%	53%

Additionally, a new 'REF2021 OA Output potentially subject to policy' filter has been introduced for Research Outputs.

search for research output... Search

Type REF 2021 OA: Output potentially subject to policy Managing organisational unit My content

REF 2021 OA: Output potentially subject to policy

Only show outputs potentially subject to policy

Only show outputs subject to policy

New 'No full publication date set' column

As described above, Outputs in the 'Published date' phase of the REF OA policy require the full Publication date (either ePub ahead of Print or Published) in order to accurately monitor compliance with the REF OA policy. Accordingly, we have introduced a new REF OA Compliance status that flags up these Outputs, and we have updated the **REF OA monitoring: Overall compliance summary screen** to include a column identifying these outputs.

REF OA monitoring: Overall compliance summary

Grouping: Managing organisation

Name	Potentially subject to policy	Outputs subject to policy	No full publication date set	Indeterminate	Compliant	Compliant (exception applies)	NOT compliant - confirm exception applicability	Not REF eligible	Compliance rate	Exception rate
All Publishing Outputs	29	62	13	1	33	11	2	2	71%	25%
All Outputs	3	4	2	0	2	0	0	0	50%	0%
All Publications	2	1	0	0	1	0	0	0	100%	0%
Books	0	1	1	0	0	0	0	0	0%	0%
Articles, Books and Book Chapters	36	236	2	0	20	212	1	1	98%	91%
Books and Book Chapters	6	10	1	0	5	0	1	3	50%	0%
Books and Book Chapters (Open Access)	0	1	1	0	0	0	0	0	0%	0%
Books and Book Chapters (Non-Open Access)	11	24	7	0	7	8	2	0	63%	53%

New hierarchical layout and grouping options for Managing organisation

New hierarchical layout and grouping options for Managing organisation

On both REF OA monitoring screens, when grouping content based on Managing organisation, we have introduced a hierarchical layout, enabling you to more easily see Organisations and their children/parents.

Name	Potentially subject to policy	Outputs subject to policy	No full publication date set
Faculty of Health Science			
Department of Clinical Medicine	49	0	0
Faculty of Science			
Department of Computer Science	0	4	2
Faculty of Social Science			
Department of Library and Information Science	0	9	2
Department of Politics	15	2	0
Welfare studies	0	2	2
Total (# unique outputs)	64	17	6

Additionally, we have introduced the option to select the hierarchical level on which to group. For example, if you only want to view the data by Faculty, hiding individual Schools and Departments, you can select that hierarchical level, and all underlying content will be rolled up and reported by Faculty.

Name	Potentially subject to policy	Outputs subject to policy	No full publication date set
Faculty of Health Science	49	0	0
Faculty of Science	0	4	2
Faculty of Social Science	15	13	4
Total (# unique outputs)	64	17	6

By default, the grouping is on level 5 of your organisational hierarchy. Anything beyond level 5 is rolled up to be included its parent value(s).

Notes:

- Where a particular Organisational unit has multiple parents:
 - The child's outputs will be listed under all parents.
 - If grouping down to only the parent level, the child's outputs will be listed under all parents.
- The 'Total number of unique outputs' row at the bottom of the table resolves any duplicates

New grouping option by UoA of associated REF2s

On both REF OA monitoring screens, we have introduced a new grouping option that enables you to limit the screen to only show those outputs with associated REF2s, grouped by the UoA(s) of the associated REF2s.

Name	Potentially subject to policy	Outputs subject to policy	No full publication date set	Indeterminate	Compliant	Compliant (exception applies)	NOT compliant - confirm exception applicability	NOT compliant - confirmed	Compliance rate	Exception rate
1: Clinical Medicine	0	4	4	0	0	0	0	0	0%	0%
11: Computer Science and Informatics	2	14	4	7	2	0	1	0	14%	0%
Total (# unique outputs)	2	16	6	7	2	0	1	0	13%	0%

10.1.3. REF OA compliance status now shown on REF2 record

We have updated the REF2 editor to indicate the REF OA compliance status (synchronised from the associated Research Output)

Real geographies, real economies and soft spatial imaginaries: creating a 'more th

	0	10	1	0	2	7	0	0	90%	78%

10.1.5. New "Compliant outputs with 'No exception' selected" editorial task

Outputs that are compliant with the REF OA policy in their own right (by meeting the Deposit and Access requirements) but where the 'No exception' exception has also been selected in error, these outputs are counted in the "Compliant - Exception applies" column of the [REF OA Monitoring: Overall compliance summary](#) screen, resulting in an overstatement of the Exception rate.

We have introduced an Editorial task for Administrators and REF Administrators to easily identify these records.

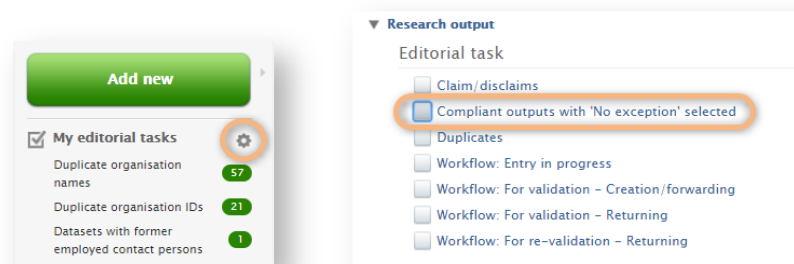

[Click here for more details ...](#)

This release includes a new "Compliant outputs with 'No exception' selected" editorial task for Administrators and REF Administrators. This task identifies those outputs that are compliant with the REF OA policy in their own right (by meeting the Deposit and Access requirements) but where the 'No exception' exception has also been selected in error (the 'No exception' exception should only be applied when confirming that an output that has not met either the Deposit or Access requirements, and no exception applies - making the output non-compliant).

Notes:

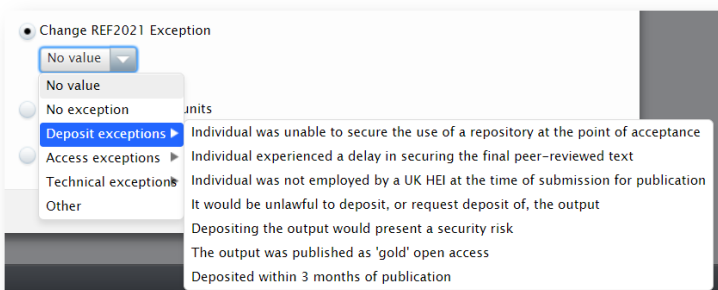

- This Editorial task is by default DISABLED, but can be enabled via the My editorial tasks 'gear' icon.

[Back to top of page](#)

10.1.6. New 'REF2021 Exception' bulk action

To aid users in actioning the new "Compliant outputs with 'No exception' selected" editorial task, we have introduced a new 'REF2021 Exception' bulk action on Research Outputs, enabling you to edit REF2021 OA exceptions in bulk.

When using this bulk action to remove the 'No exception' value from otherwise compliant outputs, select 'No value' for the 'REF2021 Exception'. This will remove the 'No exception' value, retain the Compliant status for the output(s), move the output(s) from the 'Compliant (exception applies)' column in the [REF OA Monitoring: Overall compliance summary](#) screen to the 'Compliant' column, and the Exception rate will be re-calculated.

[Back to top of page](#) 

10.1.7. Pure Academy classes

Following every major release, we have been offering [Pure Academy](#) classes covering new functionality in the REF module. Recordings of the classes are available [here](#).

A Pure Academy class covering REF Open Access functionality (including all 5.13 developments) will be held on 24 October (will be recorded). You can register [here](#).

10.2. Netherlands: SEP/KUOZ enhancements

Following on from updates delivered in the [5.12.1 release](#), this 5.13.0 release includes a number of enhancements to SEP/KUOZ functionality, as prioritised by the Dutch User Group.

10.2.1. Export to Excel option for all SEP and KUOZ tables

In response to requests for the SEP/KUOZ tables to display more years of data (which unfortunately is not possible without compromising the user experience), we have instead delivered the function to be able to export SEP/KUOZ tables to Excel.

By default, SEP/KUOZ tables will continue to only display up to:

- 6 years of data for SEP.
- 3 years of data for KUOZ.

But should the user wish to view more (up to 10 years), there is now an 'Export to Excel' option available. The table on screen will continue to be limited as per the ranges described above, but the full range (up to 10 years) will be available upon export.

KUZ C: Research output

Year range: 2007 - 2012 Apply Export to Excel Only 3 years of data can be viewed at any one time. Up to 10 years can be exported to Excel.

KUZ output type	2010				2011				2012			
	Academic	Professional	Popular	Other	Academic	Professional	Popular	Other	Academic	Professional	Popular	Other
A: 'Refereed' journal article	-	-	-	16	-	-	-	16	-	-	-	15
B: 'Non-refereed' article	-	0	0	-	-	0	0	-	-	0	0	-
D: Book chapter	0	0	0	0	0	0	0	0	0	0	0	1
N: Other conference contribution (abstract, poster)	0	0	0	2	0	0	0	2	0	0	0	0
total:	0	0	0	18	0	0	0	18	0	0	0	16

[Back to top of page](#) 

10.2.2. Visibility configurations expanded to include visibility of SEP/KUZ tab on Persons

We have expanded the SEP/KUZ visibility options to include the visibility of the SEP/KUZ tab on the Person record. We have also consolidated the existing SEP and KUZ type visibility configuration on Outputs, Activities, Prizes, and Press/Media into a single configuration.

SEP/KUZ type visibility

SEP/KUZ type visible only to Editors/Administrators

On

SEP/KUZ tab in Person editor window visible only to Editors/Administrators

On

Depending on your settings prior to upgrade, the first configurations may either be DISABLED or ENABLED - it is recommended you check your configuration upon upgrade. The "SEP/KUZ tab in Person editor window visible only to Editors/Administrators" configuration is by default DISABLED (meaning that by default, Personal users can see the SEP/KUZ tab on their Person record).

[Back to top of page](#) 

10.2.3. Updated FTE/MJE and Funding data import file

We have updated the FTE/MJE and Funding data import file template to support the following additional information:

- Additional IDs beyond just the Pure ID (e.g. Employee ID, Scopus Author ID, External source IDs).
- Inclusion of Employment type and Job title details, enabling users to better define FTE splits when an individual has multiple organisational affiliations in a single calendar year.

Further information is available in the [SEP wiki](#).

[Back to top of page](#) 

10.2.4. Warning message to highlight impact on SEP/KUZ FTE if Organisational unit affiliation period is updated

Previously, if an Organisational affiliation was edited such that the year of a SEP/KUZ FTE input was no longer valid, the SEP/KUZ FTE was simply deleted. In this release, we have introduced warning messages to inform the user if a change to an Organisational affiliation will impact on the captured SEP/KUZ FTE. This is available both in the Person editor (if the Org affiliation is manually edited) and in the Person sync job:

10.2.5. Improved display of SEP/KUOZ content on Person record

In response to user feedback, we have made some improvements to the display of SEP/KUOZ content on the Person record:

- Display not only Organisational unit name, but also type
- Ensure that the order of Organisational units in the SEP/KUOZ screen reflects the order in the main Person editor
- By default, any Organisation affiliations with no SEP/KUOZ FTE data are collapsed

10.2.6. New SEP/KUOZ Reporter role

We have introduced a new Organisational SEP/KUOZ Reporter role. This role can view the following content as 'read-only' (expanded view), along with the SEP/KUOZ tables:

- Persons
- Research Outputs
- Activities
- Prizes
- Press/Media

Further detail on SEP/KUOZ user roles is available [here](#) .

[Back to top of page](#)

10.3. Australia: Validation on FoR % apportionments outwith ERA module

In relation to issues raised in [PURESUPPORT-23599](#) - Research Output and Person - Field of Research (FoR) % apportionment field should not allow 0 or blank value **RELEASED**, since 5.8 we have made updates to non-ERA content such that FoR assignments must have a percentage apportionment greater than 0, and the total FoR % apportionment must be equal to 100%.

[Click here for more details ..](#)

We have introduced validation such that individual records cannot be saved if the FoR percentage apportionment does not add up to 100%, or any individual FoR's percentage apportionment is null or zero.

This relates to the following non-ERA content types:

- Person
- Research Output
- Activity
- Project
- Award
- Application

In order to help you identify existing content where the FoR % apportionment does not equal 100%, or where there are any FoRs with no % apportionment, we introduced a "Field of Research Apportionment Correction" job. This job corrects FoR percentages whenever it can do so without removing manually input percentage allocations:

- If there is only 1 FoR and it's % apportionment is not 100%, the job will change it to 100%
- If there are multiple FoR assignments, and they are all 0 or not set, the job will evenly allocate the % apportionment across the assigned FoRs
- Where the total FoR apportionment is equal to 100%, but there are individual FoRs with zero % allocation, the job will log these so you can update the records manually.

11. Additional features of this release

11.1. Visibility of content: Revised information text when enabling confidential content

Previously, 'Locked' users were included in the list of users for whom Confidential content would be visible. In this release, we have rectified this such that 'Locked' users are no longer included in this list. Additionally, email addresses associated with users in this list have been de-duplicated, and technical and vendor support user roles have been classed in a separate 'Technical' group.

This improvement is available for all content types where Confidential visibility is available.

[Back to top of page](#) ↑

11.2. Personal profile: Student users now able to edit profiles

Previously, only specific Pure customer bases had the ability to enable their student users (users with only a student affiliation) to modify their personal profiles. This functionality has now been extended to all Pure customer bases. As this functionality is tied with the ability for all Personal users to edit their profiles, it is enabled via *Administrator > System Settings > Person > toggle on Show edit profile button*.

[Back to top of page](#) ↑

11.3. Personal profile: File size limit for Profile photos

In order to reduce load times for Personal profile pages and Pure Portal pages, new Profile photos uploaded to a user's Personal profile are now limited to 1MB. Previously uploaded pictures that exceed this file limit will not be affected.

[Back to top of page](#) ↑

11.4. User documentation: Dynamic loading

The user documentation within Pure (accessed from *Help and support* → *Manual*) can now be loaded dynamically from S3 buckets rather than accessed as static HTML pages from within your Pure instance (as in previous versions). This means that the documentation can be updated to address any errors or missing information without you having to upgrade your version of Pure.

[Click here for more details ..](#)

You can configure whether the *Help and support* → *Manual* link should access a set of static HTML pages and PDFs installed with your Pure, or query an S3 bucket to load this HTML and PDFs dynamically.

By default all Pure instances will automatically switch to the dynamic documentation from version 5.13.0. If you do not wish to use the dynamic documentation, you can disable this by setting *Administrator > System settings > Help > Use the online version of Pure manual* to false.

The dynamic documentation is hosted in various regions around the world to ensure that the documentation loads quickly for you (the fastest-loading region is chosen). The advantage of dynamic loading is that the documentation can be frequently updated to include more content and correct errors, as well as that usage analytics (if enabled in your Pure instance) are also enabled on the documentation pages.

The analytics will be used to see which search queries users enter and which pages of the documentation they visit frequently, which will help inform product development by indicating areas that are not intuitive to use, highlight answers to frequently asked questions and to identify areas that are lacking documentation.

Improved Pure Support experience

We recently launched an **improved Pure Support experience!**

Following requests from our clients, we have redesigned our JIRA system to give you a simpler interface and a more intuitive way of working with support requests.

Easier to see what is going on

- Using a new dashboard, you can see a transparent overview of your engagement with Pure Support, such as the support requests created by yourself and your colleagues. You can also customize your own dashboard to follow issues important to you.
- Our Pure Support system, JIRA, is now available on <https://support.pure.elsevier.com> with your usual login credentials.
- You can learn more about using JIRA in this [small guide](#).

All the help you need – in one place

To make it easy for you to find the help you need, we have created a Pure Service Center webpage, available at <https://pure.elsevier.com>. From here, you can go directly to the Pure Support system (JIRA), the online Pure documentation (Wiki), visit the [Pure Academy](#) site, and stay up-to-date with planned new features via the Pure Roadmap. We suggest you bookmark the page, it is a great place to start your search for Pure help and inspiration.

Installation and downloading

See the [Request Pure distribution file](#) page for information about how to request a new version of Pure.

Other Resources and Links

If you have problems with this release please contact [Pure Support](#) to get help.

Pure hosting requirements

See the [Pure Requirements](#) page for more information about the current hosting requirements for Pure.
