How to test OPS using the new Developer's Area

1 September 2017

To be able to test you need a valid OPS account

Open Patent Services (OPS)

Open Patent Services (OPS) is a web service which provides access to the EPO's raw data via a standardised XML interface. It does this using RESTful architecture. OPS data is extracted from the EPO's bibliographic, worldwide legal status, full-text and image databases. It is therefore from the same sources as the Espacenet and European Patent Register data.

OPS can only be tested with valid user credentials

If you don't have them, you need to **register** an OPS account first and only after the EPO approves/validates your request you can start testing this web service

If you do, just **log in** with your credentials

European Patent Office
2

1. Log in with your username and password

2. Click "APIs" to get to the testing environment

3. Add testing or real App to “My apps”

You can use your already defined Apps or just create a dummy App for testing purpose as described in this slide

1. Add a new App

2. App Name: TEST

3. Create App

4. To get to the testing media click on “OPS v3.2”

5. Choose a service

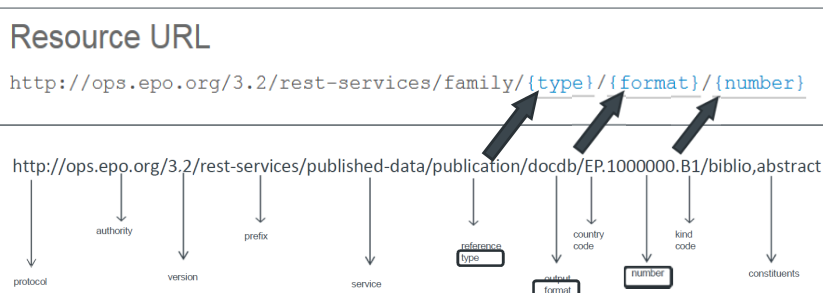

The screenshot shows the 'Developer's Area' of the European Patent Office. It lists various services under 'Classification' and 'Family' categories. The 'IPDOC Family Retrieval Service' is highlighted with a red box. A callout bubble indicates that clicking on the red title opens the service for testing.

6. Test your request

When you use this testing environment for the first time, you might need to complete the template first.

You will have to replace the terms in brackets with a proper query.

The example will then stay in the system also for other services, but you can replace it anytime you like.

NOTE: for the EPDOC format, the {number} would be the combined country code, number and possibly kind code, see <https://www.epo.org/searching-for-patents/technical/espacenet/ops/faq.html#faq-81>

Only the DOCDB format needs dots to separate country code.number.kind code

7. Set a query or use the default query

GET **INPADOC Family Retrieval Service**

Family retrieval service

Resource URL
<http://ops.epo.org/3.2/rest-services/family/{type}/{format}/{number}>

OAuth 2.0 **Send This Request** Reset
Using The Values Above

Request Response cURL

Make a request and see the response.

You can change all blue-marked information or use already pre-defined requests/samples

Resource URL
<http://ops.epo.org/3.2/rest-services/family/{publication}/{epodoc}/{EP1000000}>

European Patent Office 9

8. Set your authentication

Resource URL
<http://ops.epo.org/3.2/rest-services/family/{EP}/{epodoc}/{1000000}>

OAuth 2.0 **Send This Request** Reset
Using The Values Above

Request Response cURL

Make a request and see the response.

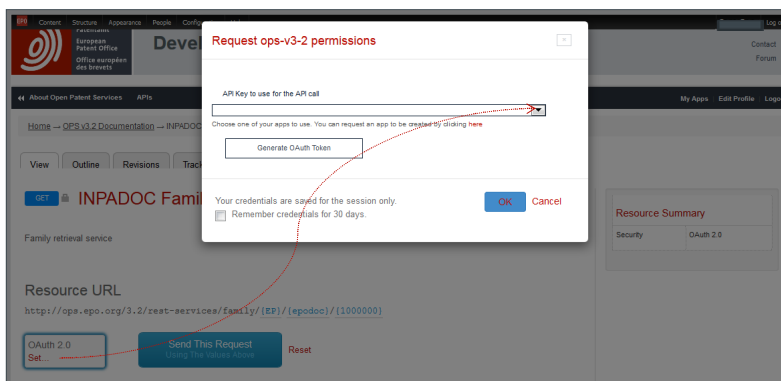

Click on the "Set..." link to choose your credentials

NOTE:
 You have to set/renew your authentication every 20 minutes, by clicking on this button.

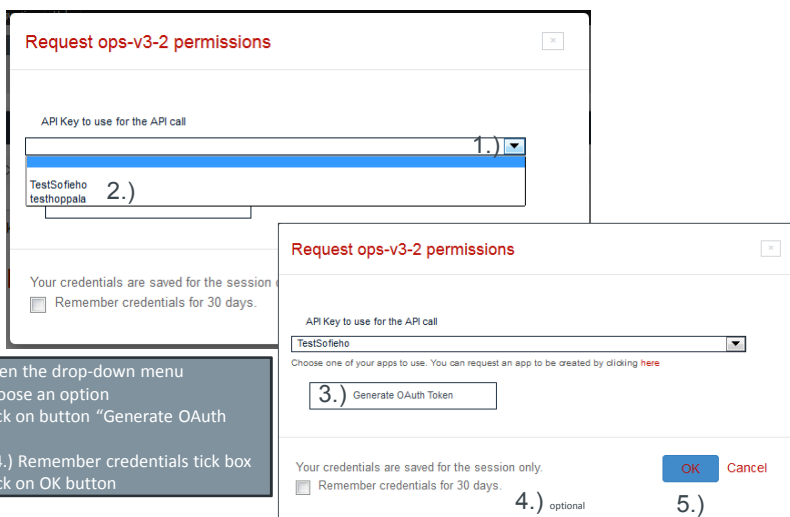

Since you have the possibility to add many Apps into your account, you can always choose which authentication you want to use for testing.

European Patent Office 10

9. Press Set to define which Authentication you want to use

10. Choose the API to generate the authentication token

Possible constituents in OPS and how they can be combined

OPS main services and its constituents

Services	Endpoints	Constituents	Can be combined
Published-data services	/3	/biblio	+
		/abstract	+
		/full-cycle	+
	/image		
	/fulltext		
	/claims		
	/description		
Bibliographic search	/4	/equivalents ⁴	
		/biblio	+
