

Text resource changes in Pure (backend)

This is an overview of the text additions and modifications to Pure's default text resources for the locale **de** between versions **5.15.0** and **5.16.0**.

This content is confidential and should not be shared or reproduced.

Note: It does not include text changes made for individual customer sites, and may include some texts that are not visible on your Pure instance (used for Elsevier supporter role, inactive modules or modules from other countries such as REF, or different system configurations).

The keys in the translations are not necessarily indicative of the functionality. Changes in key between releases will override any custom text resource changes in your Pure.

775 + algorithmInfoDialogTooltipText2=If you want to ensure that specific outputs are attributed to individuals, you can do so by locking the output manually on the page of the publication. The algorithm will then respect this lock and calculate the highest GPA under those circumstances.
776 + algorithmInfoDialogTooltipText3=The algorithm works as follows:
777 + algorithmInfoDialogTooltipText4=1. Researchers with only one output in the pool have their one output attributed to them and the output is removed from the pool.
778 + algorithmInfoDialogTooltipText5=2. Remaining researchers have their top graded output attributed to them. Where the grade is the same, single-authored outputs are prioritized over co-authored outputs.
779 + algorithmInfoDialogTooltipText6=3. Once each researcher has been attributed one output, the "best of the rest" is selected, starting with the strongest outputs where there is only one author to whom this output can be attributed. This includes outputs by former members of staff.
780 + algorithmInfoDialogTooltipText7=4. When the number of remaining unattributed outputs is smaller than the number of outputs with the same grade, then the outputs are selected so that they optimize spread across Cat A staff within the UoA.

38 + globalsyncimport.pureIdFallbackEnabled-label=Pure-ID-Zuordnung aktivieren
39 + globalsyncimport.pureIdFallbackEnabled-description=Durch die Aktivierung dieser Funktion können die Synchronisierungen in Pure die Zuordnungen mit Pure-IDs durchführen. Dies bedeutet: Wenn Sie manuell eine Zuordnung zu einem Inhaltselement in Pure hinzugefügt haben und die Pure-ID als die Zuordnungs-ID in den Importdaten (Ansicht/xml) angeben, wird die Synchronisierung diese übernehmen und entsprechend aktualisieren. Verwenden Sie diese Funktion mit Vorsicht. Unterstützte Synchronisierungen: Alle Synchronisationen mit Ausnahme der Bewilligungs-, Projekt- und Antragsynchronisation haben das Präfix „Konfigurierbar“.

54 + globalsyncimport.pureIdFallbackEnabled-legend=
55 + globalsyncimport.pureIdFallbackEnabled-description=Enabling this feature will make it possible for the synchronizations in Pure to be able to match on Pure IDs on associations.\n This means that if you have manually added an association to a piece of content in Pure and you provide the Pure ID as the association ID in the import data (view/xml), the synchronisation will take ownership of it and update it accordingly. Use this feature with caution. \n Supported synchronizations: All synchronizations prefaced with 'Configurable' except the Award, Project and Application synchronisation.
