

# Careers PAGE OPTIONS

With Paycor Recruiting, you can create a “careers” page for your company website that allows you to post job openings and receive applications online. There are three different options to create your careers page:

## Option One: IFrame

Paycor will provide your company with a single line of code. This will dynamically display all jobs, descriptions, and applications needed for candidates to apply.

Your team will simply place the line of code on your company’s careers page where you would like the list of jobs to appear.

*This option takes about 10 minutes of work from you and is used by 60% of our customers.*

### Benefits

- Customers can use their own domain to maintain website branding with no effort.
- No ongoing maintenance is required!

## Option Two: Paycor Hosted

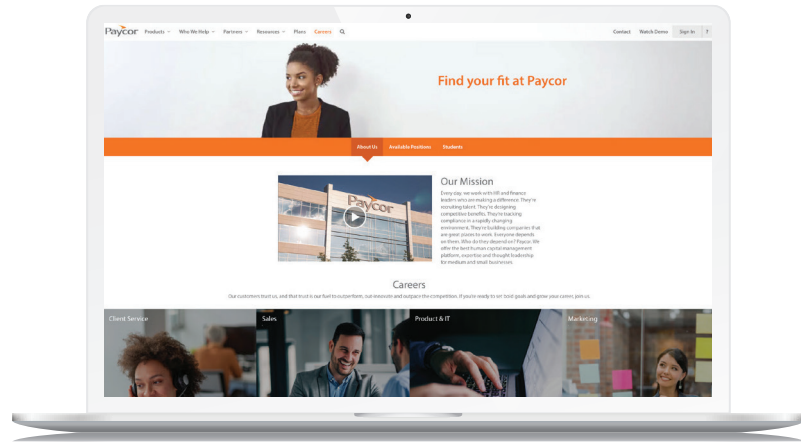

We will build a careers page by either scraping the source code off your company website or using a standard template with your logo. The site will be hosted on a Paycor domain.

Your team will connect the Paycor URL to your company’s website.

*This option takes about 10 minutes of work from you and is used by 35% of our customers.*

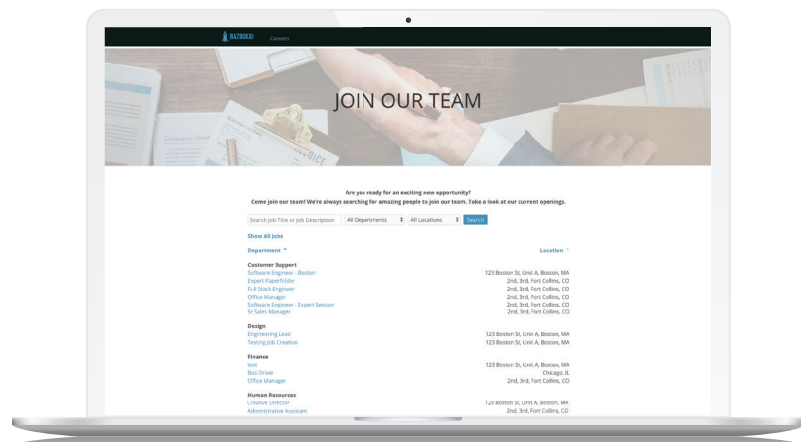

### Benefits

- This can be a good option if your company has very limited IT or web resources.
- The page will maintain the look and feel of your current website and branding.

### Disadvantages

- None. We recommend this as the easiest and best careers page option.

### Disadvantages

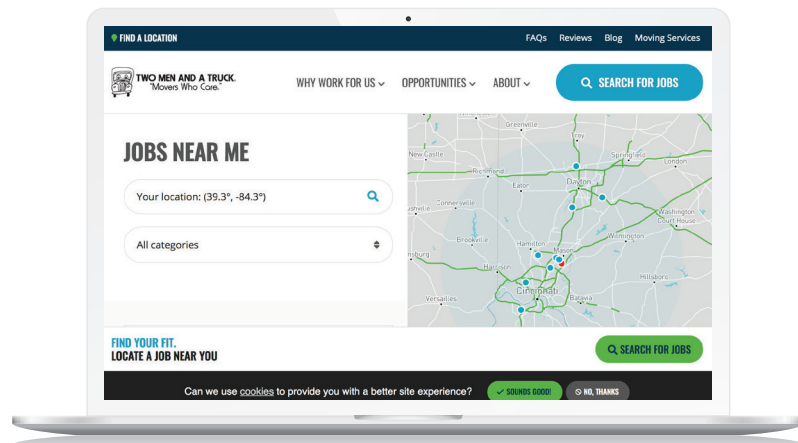

- Your careers page will be on a different domain than the rest of your website.
- Making a change to your website navigation will require Paycor to edit or rebuild your career page.

## Option Three: ATOM Feed + IFrame

Paycor generates a real-time ATOM Feed of all open jobs. This feed can be used to create a fully customized careers page.

Your team will need to develop custom code for the careers page.

*This option requires your company to have access to development resources and requires extensive coding. Less than 5% of our recruiting customers use this option.*

### Benefits

- Provides your company the ability to fully customize the careers page appearance.

### Disadvantages

- Requires development resources and is very time consuming.

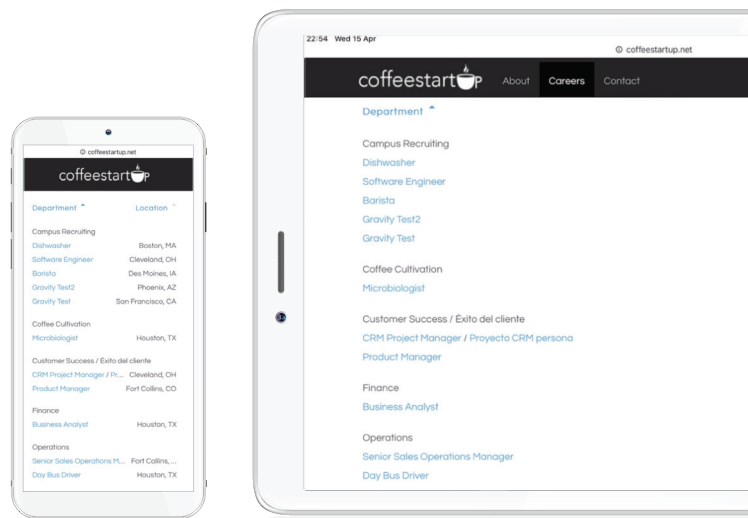

## Frequently Asked Questions

### How does Paycor Recruiting handle users on mobile devices?

IFrame and hosted pages fully support mobile devices. If your company website is responsive, Paycor's content will resize automatically. If your company website is NOT responsive, we can direct applicants to a mobile-friendly version of your careers page generated by Paycor.

### Will Paycor use our website's custom type-faces?

We can load and use any fonts available on a public CDN (like Google Fonts). If your company website is using a proprietary font, then our team will attempt to match the careers page as closely as possible.

Paycor creates HR software for leaders who want to make a difference.

For 30 years, we've listened to and partnered with leaders of medium and small businesses, so we know what they need: HR technology that saves time, powerful analytics that provide actionable insights and dedicated support from HR experts. That's why more than 40,000 SMBs trust Paycor to help them solve problems and achieve their goals.
