

American Indian and Alaska Native (AI/AN) Disparities in Causes of Death, Life Expectancy, and Social Determinants of Health

American Indians and Alaska Natives (AI/ANs) experience many disparities in leading causes of death compared to their White counterparts in the United States. **Figure 1** lists the top 10 leading causes of death for all non-Hispanic AI/ANs in 2020, with a comparison as to how each of these conditions ranked among all non-Hispanic Whites in 2020. **Figure 2** lists the top 3 leading causes of death by age group in 2020 for non-Hispanic AI/ANs, with a comparison as to how each of these conditions ranked among non-Hispanic Whites in the same year and age group.

Figure 1. Leading Causes of Death Among All Non-Hispanic AI/AN versus All Non-Hispanic White, 2020¹

Leading Cause of Death	Among Non-Hispanic AI/AN		Among Non-Hispanic White		Difference
	Rank	% of Deaths	Rank	% of Deaths	
COVID-19	1	22.8%	3	11.7%	11.1%
Heart disease	2	19.9%	1	29.6%	10.3%

In 2021, non-Hispanic AI/AN life expectancy at birth was 65.2 years, compared to 76.1 years among the total U.S. population.² Specifically, between 2020 to 2021, non-Hispanic AI/ANs experienced the greatest decrease (1.9 years) in life expectancy.³ This life expectancy of 65.2 years in 2021 is equal to the life expectancy of the total U.S. population in 1944.³ There are many differences in outcomes related to social determinants of health which may impact this disparity in life expectancy, as listed in **Figure 3**.
