

Preparation before scanning

I. The stuff for scanning

1. Sterilized scanner tip, 3-way syringe, and gloves

2. Please prepare the scan body before doing the implant

3. Close the shadow-less lamp.

II. The intraoral preparation before scanning

1. Clean off the tartar, saliva and blood.
2. The tartar, saliva and blood will affect the crown making if not cleaned off.

3. Expose the margin of the prepared tooth so that the scanner catch it clearly.
