

SA Dental Integrates Telehealth Into Their Digital Patient Pathways

Telehealth consults are a key part of the SA Dental patient journey. During COVID-19, we needed to rapidly adapt our entire pre-screening process, and post-consult information, into a digital experience to ensure continuity of urgent medical care.

Within weeks, we embedded healthdirect Video Call within the Personify Care digital patient pathway. This enabled us to remotely triage patients, reliably capture patient histories, and deliver emergency specialist telehealth consults.”

DR MICHAEL BRADLEY BDS, MBA
DIRECTOR CLINICAL BUSINESS
SA DENTAL

How to remotely triage patients and deliver emergency specialist consultations

COVID-19 restrictions were introduced in South Australia for private and public dental services in March 2020. As a result, SA Dental and Adelaide Dental Hospital became the focal points for triaging and treating emergency dental cases.

A digital health solution was needed to remotely triage patients, reliably capture patient histories, and deliver emergency specialist telehealth consults.

The solution needed to be deployed within days and support rapidly changing COVID-19 protocols. It was also important to achieve high patient response rates to minimise the need for in-person assessments where clinically appropriate.

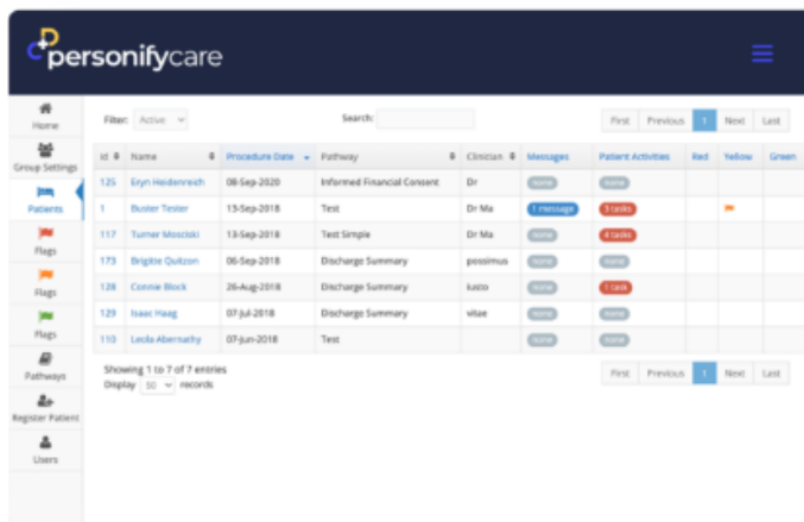

Managing patient interactions before and after a SA Dental Telehealth consult

To respond to the surge in demand, manual workflows were converted into digital patient pathways using Personify Care and healthdirect Video Call.

SA Dental was able to manage patients and streamline communication for patients requiring urgent care via video calls. Patients were invited to their care pathway via SMS and provided with a secure checklist that screened their health history and, where appropriate, triggered an emergency specialist video consult.

Clinicians controlled the pathways and could update them directly in accordance with SA Health guidelines, as required.

The screenshot shows the Personifycare web application. On the left is a navigation menu with icons for Home, Patients, Flags, Pathways, Register Patient, and Users. The main area displays a table of patient records. The table has columns for ID, Name, Procedure Date, Pathway, Clinician, Messages, Patient Activities, and a status column with Red, Yellow, and Green indicators. The table shows 7 entries, with the first few rows visible.

ID	Name	Procedure Date	Pathway	Clinician	Messages	Patient Activities	Red	Yellow	Green
125	Eryn Hadenreich	08-Sep-2020	Informed Financial Consent	Dr	1 message	1 activity			
1	Buster Tester	13-Sep-2018	Test	Dr Ma	1 message	1 activity			
117	Turner Moscosi	13-Sep-2018	Test Single	Dr Ma	1 message	1 activity			
173	Brightie Outson	06-Sep-2018	Discharge Summary	perissimos	1 message	1 activity			
128	Conce Black	26-Aug-2018	Discharge Summary	ludo	1 message	1 activity			
129	Isabel Heng	07-Jul-2018	Discharge Summary	vltse	1 message	1 activity			
110	Leola Abernathy	07-Jun-2018	Test		1 message	1 activity

97% patient response rate to SA Dental Telehealth Patient Pathways

Over 6,581 clinical risk factors were automatically screened, enabling staff to triage patients and provide emergency care remotely.

Within the first 24 hours of South Australia's November COVID-19 lockdown, the digital patient pathways enabled SA Dental staff to triage and provide emergency care to 90 inbound patients remotely. As a result, only one patient required hospital admission.

Within the first 24 hours of South Australia's November 2020 COVID-19 lockdown, SA Dental staff triaged and provided emergency care to 90 inbound patients remotely.

Shaping the future of health in South Australia

Personify Care has now been extended to the pre-admission assessment of non-emergency patients before surgery at the Royal Adelaide Hospital.

Staff feedback is overwhelmingly positive: *"Very user-friendly programme with many advantages to our booking procedures"* - Judy Currie, Registered Nurse, SA Dental.

Digital patient pathways can simultaneously achieve a personalised patient experience and increase health services' capacity to deliver high-value care to patients during COVID-19 and beyond.

How to embed video consultations into your patient journey

Starting to use Personify Care's patient pathways alongside healthdirect Video Call is straightforward and typically involves 4 simple steps:

Telehealth Pathway Setup

We help you set up the initial version within 24-48 hours, then we configure links to healthdirect Video Call so you can send patients straight into their waiting room from their Pathway

Review Your Pathway

Part of the onboarding process where we share access to a digital version of the Pathway and review each step

Train Your Team

Online induction for users to access their accounts and register test patients so they get to know the patient experience firsthand and continually improve.

Register Patients

Once the final version of the pathway is approved, you're ready to start inviting your patients to the platform.
