Release Notes for Version 0.54

Release Notes
Version 0.54

DD.MM.YYYY

USER EXPERIENCE

NEW

10208	**Failed email notification**
	In the event of an email failing, such as sending to a non-existent email address, a notification is displayed in the notification bell, as well as in the FAILED tab of the Email Log

RESOLVED

9732	**Downloading documents in list view**
	Resolved an issue preventing documents from downloading, when viewed in list view.

CUSTOMERS AND INVOICES

NEW

8547	**Load components of kitsets**
	A new option has been added to customer quotes and invoices, Load Components.
	This option only becomes available after a "When Invoiced" kitset is added to the invoice. When chosen, it replaces the singular kitset line with the different components that make up the kitset.
9996	**Late Payment Fees are now available**
	Late Payment Fees are now able to be calculated for all customers directly from within Infusion.

Release Notes
Version 0.54
DD.MM.YYYY

10287	**Customer Refund by Direct Credit** Customer refunds can now be paid by a direct credit batch file. Customers will need to have their bank account details recorded to be paid out using direct credit.

RESOLVED

8863	**Error in customer contact saving** Corrected an issue preventing customers from being saved.
9429	**Pick & Pack finished but Invoice status remains as Picking** An issue where a Pick & Pack is posted and finished, but the invoice still has a picking status, has been resolved.
9980	**Stop Quotes converted to Invoices while being edited** The invoice button is now correctly disabled when other users are editing the quote.

JOBS

RESOLVED

10068	**Job List report displaying invoiced name** The Job List report now correctly displays the Invoiced Name, rather than the Customer Name.

Release Notes
Version 0.54

DD.MM.YYYY

ENHANCEMENT

9671	**WIP Report added to the Jobs > More Options menu**
	A new report has been added to the More Options menu within the Jobs menu. This allows users to view the work in progress on all jobs within a selected set of filters.

PRODUCTS

NEW

10277	**New Label Printing features**
	Two new ways to print labels have been introduced in this release. Product labels can now be printed automatically as part of receipting the product. Alternatively product price labels can now also be printed in bulk.
	Product Price Updates
	Bulk pricing updates can now be performed. This allows a pricing update of either an increase, or decrease by a dollar or percentage amount for a chosen selection of products.

RESOLVED

9651	**Tag already exists error when trying to do a WooCommerce sync**
	Resolved an underlying cause that can creates a tag already exists error, when Infusion syncs to WooCommerce.

Release Notes
Version 0.54

DD.MM.YYYY

9686	**Reorder by Sales report incorrect calculations** A change has been made to the Product Reorder- By Sales report so that it now only looks at quantities used on invoices and sold kitsets
9736	**Kitsets - pricing tab - fix button to "Update price levels now"** An issue causing the Update Price Levels now button to not populate any selling prices in some situations has been resolved.
10004	**Deleted price levels included in a product price export** Price levels that have been deleted, are now no longer included in the Product Price level export.
10007	**Ambiguous price level error when importing price levels** Corrected an issue that would cause an Ambiguous Price Level error when importing a price level that has the same name as a previously deleted price level.
10008	**Custom field autocomplete throws a not found error on webtags** Resolved an issue where values in a web tag don't show as expected, when viewing the website tab of a product.
10066	**Ambiguous price level error when importing** Products with a product code that matches a deleted product now no longer generate an Ambiguous price level error when being included as part of a product price import.
10106	**GST Error on Stock Write Off** Resolved an issue where writing off products that are either zero rated or exempt from GST cannot be posted.

Release Notes
Version 0.54

DD.MM.YYYY

10198	**Not unique error when importing Supplier product data** Inactive products are no longer included as part of the supplier product data export. When that data is imported in, the underlying cause for the "Not Unique" error caused by inactive products has also been resolved.
10214	**Not unique error when importing quantity break pricing.** Resolved the underlying cause for the Not unique error appearing when including a product that shares the same product code as a deleted product in the Quantity break pricing import.

FINANCIALS

RESOLVED	
9897	**Bank accounts remain after Yodlee accounts unlinked** When users are unlinked in Yodlee, the bank feeds are now cleared
9908	**Unreconciled issue when a negative split is on an imported transaction** Resolved an issue where a negative split on a transaction, imported on a bank file, can leave an unreconciled amount after reconciling the transaction.
