PRODUCTS

RESOLVED

11383 Product Label printing incorrect price when Product Group markup pricing option is used

Resolved an issue where Product Label printing will print an incorrect price if the product is part of a Product Group that uses a Product Group markup pricing option.

ENHANCEMENT

10553 Enhancement to Serial tracked products functionality

Multiple improvements have been made to Serial Tracked product functionality across different functions and modules, including:

- By default, the Serial Number list has the filter “Has Overall Stock” applied. To view all serial numbers, remove this filter from the global search bar.
- A new location selection option has been added to the Serial Numbers functionality. This allows the view to be filtered to the serial numbers in a specific location or all locations.
- Serial tracked products that are in multiple locations now have the quantity of each location displaying when you hover over the quantity.
- Visibility of both the on hand and allocated amounts of a serial number on both the Product Serial Numbers list and the Serial Numbers tab of a Product Enquiry.
- When selecting a serial number in a transaction, only the available quantity is displayed. Serial numbers that have previously been allocated aren’t shown for selection.

API / INTEGRATIONS

RESOLVED	
9944	<p>WooCommerce Sync or re-sync to show start and Syncing from date and time</p> <p>Updated how the Sync shows the start date and time as well as the syncing from date and time when syncing information to WooCommerce.</p>
10929	<p>WooCommerce Variable attributes not updating to WooCommerce on Add</p> <p>Variable attributes are now correctly updating WooCommerce when new products are created that should be using those variable attributes.</p>
10953	<p>WooCommerce website is not responding error when unlinking a variant</p> <p>Resolved an issue where unlinking a variant from a product in WooCommerce causes the error e-Commerce website is not responding.</p>
ENHANCEMENT	
10699	<p>Product External API Cost Extension</p> <p>The creation of new products through the API now allows the inclusion of Purchase Cost, if the user role has permission to load these costs. If the user role doesn't have these permissions, it will result in a bad data response.</p>
