SAFETY INSTRUCTIONS

WARNING

Do not open the equipment unless totally familiar with electrical circuits and service manual.

ELECTRICAL SHOCK HAZARD

Only qualified personnel should work inside the equipment.

Do not approach the radome closer than 0.5 m when it is transmitting.

Microwave radiation can cause severe injury or illness. Radiation level: 10 W/m² at 0.5 m

Turn off the power at the mains switchboard before beginning the installation. Post a sign near the switch to indicate it should not be turned on while the equipment is being installed.

Fire, electrical shock or serious injury can result if the power is left on or is applied while the equipment is being installed.

CAUTION

Confirm that the power supply voltage is compatible with the voltage rating of the equipment.

Connection to the wrong power supply can cause fire or equipment damage. The voltage rating appears on the label at the rear of the terminal unit.

Use the correct fuse.

Use of wrong fuse can result in damage to the equipment.

Keep the following compass safe distances.

	Standard	Steering
Antenna Unit IC-118	0.30 m	0.30 m
Terminal Unit IC-218	0.65 m	0.40 m
Printer PP-510 or PP-520	1.00 m	0.80 m
Junction Box IC-318	0.90 m	0.60 m
Distress Alert/ Received Call Unit IC-305	0.50 m	0.30 m
Alarm Unit IC-306	0.50 m	0.30 m
SSAS Alert Unit IC-307	0.70 m	0.45 m
AC/DC Power Supply Unit PR-240	0.90 m	0.60 m
AC/DC Power Supply Unit PR-241	0.85 m	0.55 m
Keyboard	0.70 m	0.45 m

Ground the equipment to prevent electrical shock and mutual interface.

SYSTEM CONFIGURATION

Standard configuration is shown with solid line.

*: At least two SSAS Alert Units are required.

** : Mandatory for EGC operation as required by IMO RES. A.664(16).

CATEGORY OF UNITS (required by IEC60945):

Unit	Category
Terminal Unit	Protected from the weather (For indoor installation)
Antenna Unit	Exposed to the weather (For installation on the open deck)
Other Units	Protected from the weather (For indoor installation)

EQUIPMENT LISTS

Standard supply

Name	Type	Code No.	Qty	Remarks
Antenna Unit	IC-118	-	1	w/FP16-02501
Terminal Unit	IC-218	-	1	w/CP16-05220, SP16-01301, FP16-02610

	OMJ-56740-*	000-198-356-1*	1	Hard copy manual, Japanese

1. MOUNTING

NOTICE

Do not apply paint, anti-corrosive sealant or contact spray to coating or plastic parts of the equipment.

Those items contain organic solvents that can damage coating and plastic parts, especially plastic connectors.

1.1 Antenna Unit

1.1.1 Mounting location

Refer to IMO resolutions A663(16) and A.807(19), as amended.

- Mount the omnidirectional antenna unit high atop a mast clear of stays and the turning diameter of a radar antenna. The ideal mounting location would be where no obstacle appears in the fore and aft directions down to -5° and down to 15° in the port and starboard directions. The concept is illustrated in the figure below. Shadow sector of the antenna mast, whip antenna, etc. should be within two degrees at one meter from the antenna unit.

- When two FELCOMs are installed, the horizontal separation shall be at least 1.5 m and the vertical separation, 1 m or more.
- If Inmarsat ship earth stations other than C are installed, separate the Inmarsat antenna at least 8 m from the Inmarsat-C antenna.

- Separate the antenna unit from an S-band radar as shown in the figure to the right:

1. MOUNTING

- The allowable vibration level as specified by Inmarsat is as shown in the table below.

Allowable vibration level

Frequency	Level
2 to 10 Hz	2.54 mm Peak Amplitude
10 to 100 Hz	9.8 m/s ² Peak Acceleration

- Avoid the location near tunnels and stacks; smoke and soot on the radome can lower signal level (10 m or more in horizontal distance).
- Separate the antenna unit 5 m from HF, VHF or 27 MHz antenna.

1.1.2 Mounting

The antenna cable is available in lengths of 30 m, 50 m and 100 m (see table below).

Cable length	Type	Remarks
30 m (no armor)	TP5FBAW-5DFB	TNC connector at both ends
30 m (w/armor)	5D-FB-CV-NP	N connector on one end (antenna side)
50 m (w/armor)	8D-FB-CV	
100 m (w/armor)	12D-SFA-LITE-CV	

Note: When using the optional installation kit to install the antenna, refer to the outline drawings at the back of this manual.

Antenna installation

Select a location to weld the grounding stud bolt (M6), keeping in mind the length of the grounding cable RW-4747 (Included as installation materials) is 340 mm. The location for welding the grounding stud bolt should allow the antenna ground and mast ground to be connected with the grounding cable (to ground lightning strikes). For detailed measurements, refer to the outline drawings at the back of this manual.

For information on wiring the antenna cable, refer to the manual included with the antenna unit.

1.2 Terminal Unit

Select a mounting location, considering the following points.

- The temperature and humidity should be moderate and stable.
- For maintenance and checking purposes, leave sufficient space at the sides and rear of the unit and leave slack in cables.

Mounting

Tabletop mount

- 1) Fix the hanger (option) to a table with four self-tapping screws (5x20, supplied), referring to the outline drawing at the back of this manual.
- 2) Screw knobs and washers to terminal unit loosely.
- 3) Set the terminal unit to the hanger and tighten knobs.

Terminal unit, tabletop mounting

Flush mount

Use locally supplied pan head screws (M4x20) when the thickness of the bulkhead is from 11 to 14 mm. For bulkhead which exceeds 14 mm in thickness the length of the pan head screws should be bulkhead thickness $A + 7.8 \pm 2$ mm. Also the length of B should be max. 8 mm ($B \leq 8$ mm).

Bulkhead, sectional view

1. Prepare a cutout in the mounting location whose dimensions are as shown in the outline drawing at the back of this manual.
2. Fix the display unit with six pan head screws, inserting them from the inside of the bulkhead. Refer to the outline drawing at the end of this manual.

1. MOUNTING

How to connect the LAN cable

Connect the LAN cable using the sponge and LAN cable support (supplied). This procedure should be done even if the LAN cable is not used, to waterproof the unit.

1. Attach the sponge for LAN terminal to the LAN terminal.

2. Use the binding screw (pre-attached at the rear of the unit) to fix the LAN cable support.

3. Connect the LAN cable to the terminal unit. Fix the LAN cable to the LAN cable support with a cable tie (supplied).

Keyboard

1. Stick the supplied INM-C18 function key stickers to their respective keys (F1 to F10).
2. Referring to the following steps, fit the static electricity prevention sheet (included as installation materials) to the keyboard, then fix the keyboard at the installation location using the double-sided supplied tape (Tape V/H).
 - 1) Remove the protective film from one side of the supplied double-sided tape, then stick the tape to the 4 edges of the rear of the keyboard.
 - 2) Remove the protective film on both sides of the sheet, then fit the sheet to the keyboard.

Note: The sheet is extremely thin and should be handled with care.
 - 3) Remove the protective film from the double-sided tape on the rear of the keyboard, then fix the sheet to the tape.
3. Stick the supplied smaller velcro tape (Fastener, 5 pcs.) to the four corners of the rear of the keyboard and to the EMI core.
4. Fit the supplied larger velcro tape (Fastener, 5 pcs.) to the smaller tape.
5. Remove the protective film from the larger velcro tape.
6. Fit the keyboard at the installation location.
7. Depending on the installation location and environment, move and then fit the EMI cores as required.

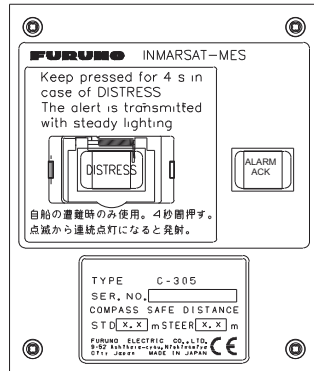

The following points should be observed when moving the EMI cores:

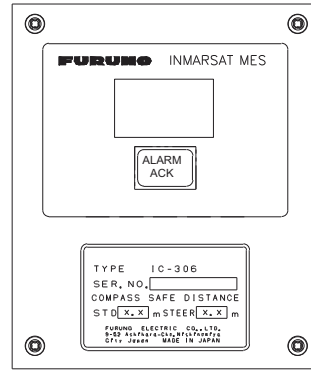

- Do not remove or disconnect the USB cable.
- Do not apply undue stress or weight to the base of the cable connection on the keyboard.
- The EMI core must not be suspended freely as this puts strain on the cable.
- Re-wrap the cable around the EMI core a total of 6 times. The cable should pass through the EMI core a total of 7 times.

1.3 Distress Alert/Received Call Unit IC-305/Alarm Unit IC-306

Distress alert/received call unit IC-305

Alarm unit IC-306

Bulkhead mounting

1. Remove four screws from the unit to separate the bottom chassis from the top cover.
2. Fix the bottom chassis to the mounting location with four self-tapping screws (supplied).
3. Cable can be led in from the bottom or the rear panel. For rear panel entrance, change the clamp orientation as follows.
 - 1) Unfasten two screws to remove the cable clamp.
 - 2) Turn the clamp 90 degrees.
 - 3) Refasten two screws removed at step 1) to fix the clamp.

Unfasten these screws.

Rotate.

Refasten screws.

- 4) Run the interconnection cable through a cable entrance and connect it to terminal board.

Flush mount

The optional flush mounting kit OP16-27 (Code No.: 004-448-000) is required.

Name	Type	Code No.	Qty
Fixture	16-018-4201-1	100-317-841	1
Pan head screw	M3x6	000-800-362	4
Self-tapping screw	4x16	000-162-605-10	4

1. Make a cutout in the mounting location, referring to the outline drawings at the back of this manual.
2. Fix the unit to the fixture with four pan head screws (supplied).
3. Fasten four self-tapping screws ($\phi 5$, supplied) to fasten the fixture to the mounting position.

1.4 Printer (option)

Mount the printer (PP-510 or PP-520) on a tabletop with the fixtures supplied. Refer to the outline drawing at the end of this manual for the mounting dimensions. The right figure is for PP-520

1. Decide the location of the printer.
2. Set the ink ribbon cartridge and the roll paper to the printer.
3. Set the fixtures (left/right) onto the printer. Fasten them with four self-tapping screws ($\phi 5 \times 20$).

1.5 AC/DC Power Supply Unit (option)

For PR-240

Fix the unit on a table with four self-tapping screws.

AC/DC power supply unit PR-240

For PR-241

To mount the PR-241, see the installation guide supplied with the PR-241.

1.6 Junction Box IC-318

The junction box IC-318 is connected to the terminal unit by using the cable assy 16S0344 (2 m, attached to the junction box). Install the junction box within 2 m from the terminal unit.

1. Remove four screws from the unit to separate the bottom chassis from the top chassis.
2. Fix the bottom chassis to the mounting location with four self-tapping screws (4x16, supplied).
3. Connect the cables referring to Chapter 2.

Junction box IC-318

2. WIRING

CAUTION

The terminal unit is shipped with a 15 A fuse in its power cable. This fuse is for use with a 12 VDC power supply.

For a 24 VDC power supply, replace the fuse with a 7A fuse (supplied). Attach the "7A" label to the fuse holder on the power cable. Use of a wrong fuse can damage the equipment.

Wiring of FELCOM 18

2.1 Antenna Cable Connector at the Terminal Unit

2.1.1 Antenna cable TP5FBAW-5DFB (30 m)

Remove the outer sheath, armor and inner-sheath by the dimensions shown.

Cover with heat-shrink tubing and heat.

Set the nut, washer, gasket, clamp onto cable as shown.

- Be careful not to damage the braided shield.

Fold back the braided shield onto the clamp and trim the shield as shown.

Make the length of insulator 3.5 mm and the length of the core 5 mm.

- Be careful not to damage the core.

Cut braided shield here.

Set the center pin to the core and solder the pin from the hole in the pin.

(Pull the pin with approx. 1 kg of force to check strength of solder joint.)

- Be sure the solder is flush with surface of pin.

- Be sure there is no gap between center pin and insulator. Do not push the center pin into the insulator.

- Do the soldering as quickly as possible so as not to deform the insulator.

Set the ring and insulator ring onto the cable.

Set the shell to the cable then turn the nut to tighten. (Do not tighten by turning shell.) -

Use a wrench or the like to tighten the nut securely.

How to fabricate antenna cable TP5FBAW-5DFB

2.1.2 Antenna cable 5D/8D-FB-CV (50 m)

Connector type N-P-5D-FB

Remove outer sheath and armor by the dimensions shown left.
Expose inner sheath and shield by the dimensions shown left.

Remove insulator and core by 10 mm.

Twist shield end.

Slip on clamp nut, gasket and clamp as shown left.

Fold back shield over clamp and trim.

Cut aluminum foil at four places, 90° from one another.

Fold back aluminum tape foil onto shield and trim.

Expose the insulator by 1 mm.

Expose the insulator by 5 mm.

Slip the pin onto the conductor. Solder them together through the hole on the pin.

Insert the pin into the shell. Screw the clamp nut into the shell.
(Tighten by turning the clamp nut. Do not tighten by turning the shell.)

How to fabricate antenna cable 8D-FB-CV

2. WIRING

Connector type N-P-8D-FB

Remove outer sheath and armor by the dimensions shown left.
Expose inner sheath and shield by the dimensions shown left.

Remove insulator and core by 10 mm.

Twist shield end.

Slip on clamp nut, gasket and clamp as shown left.

Fold back shield over clamp and trim.

Cut aluminum foil at four places, 90° from one another.

Fold back alminum tape foil onto shield and trim.

Expose the insulator by 1 mm.

Expose the core by 1 mm.

Slip the pin onto the conductor. Solder them together through the hole on the pin.

Insert the pin into the shell. Screw the clamp nut into the shell.
(Tighten by turning the clamp nut. Do not tighten by turning the shell.)

Connector type N-P-8DSFA

2. WIRING

2.1.3 12D-SFA-LITE-CV (100 m)

Dimensions in millimeters

Remove outer sheath and armor by the dimensions shown left. Remove inner sheath and expose shield by the dimensions shown left.

Remove the insulator beneath shield by 10 mm and expose the core.

Twist shield end.

Heat shrinkable tube or vinyl tape

Slip on clamp nut, washer, gasket and clamp as shown left.

Fold back shield over clamp and trim.

Cut aluminum tape at four places, 90° from one another.

Expose the insulator by 2 mm.

Expose the conductor (core) by 5 mm.

Fold back aluminum tape over clamp and trim.

Trim aluminum tape here.

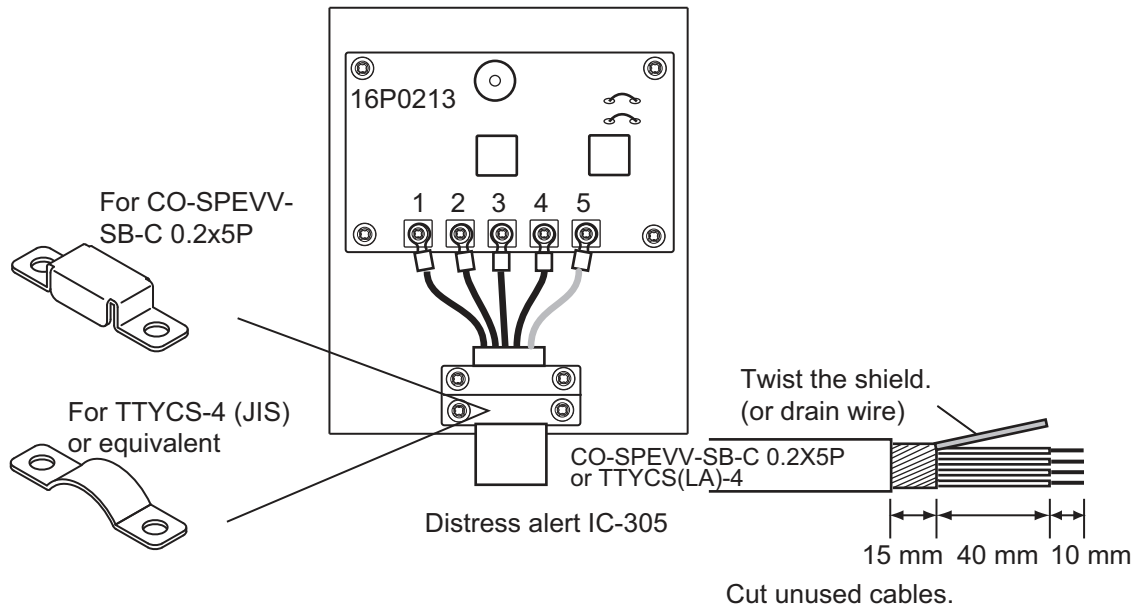

Slip the pin onto the conductor. Solder them together through the hole on the pin. Insert the pin into the shell. Screw the clamp nut into the shell. Tighten them by turning the clamp nut. (Do not tighten by turning the shell.)

How to fabricate antenna cable 12D-SFA-CV

2.2 Distress Alert/Received Call Unit IC-305

Use the installation materials CP16-02201 to connect the IC-305. The optional CO-SPEVV-SB-C 0.2x5P cable or JIS cable (Japan Industrial Standard) TTYCS(LA)-4 or equivalent are available to connect with the junction box IC-305. Select the cable clamp attached according to the diameter of cable, and fix the armor of the cable with the clamp.

Wiring of distress alert IC-305

2.3 Alarm Unit IC-306

A maximum of three alarm units can be connected to the junction box IC-318, in parallel. To distinguish the incoming indicators, set jumper wires for the second alarm unit as shown below. For connection, refer to 2.2 Distress Alert/Received Call Unit IC-305.”

Alarm unit IC-306

	No.1 (default setting)	No.2	No.3
JP1	Open	Open	Short
JP2	Short	Open	Open

2.4 Junction Box IC-318

Use the junction box IC-318 to connect the distress alert/received call unit IC-305 and other units (max. four units) to the terminal unit. Unfasten four screws to remove the units cover to connect cables.

For connection, use the optional 5 pair cable CO-SPEVV-SB-C 0.2x5P, JIS cable (Japan Industrial Standard) TTYCS(LA)-4 or equivalent.

Junction Box IC-318

Input sentences

The following sentences can be input by a GPS navigator.

3. INITIAL SETTINGS

This chapter shows you how to setup the equipment. Some procedures require entry of job no. and password. Ask your dealer.

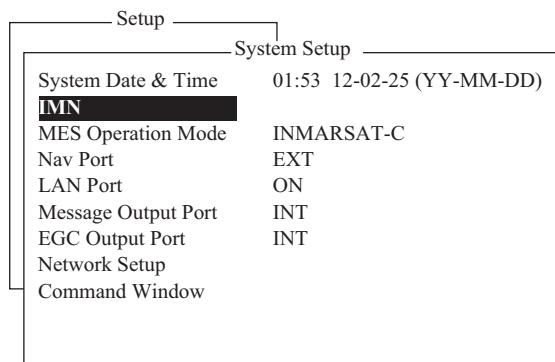

3.1 How to Set the IMN (INMARSAT MOBILE NO.)

Set your IMN (Inmarsat Mobile No.) as shown below.

1. Turn the power on.
2. Press the function key [F8] to show the [Setup] menu.

3. Press **1** key to display the [System Setup] menu.

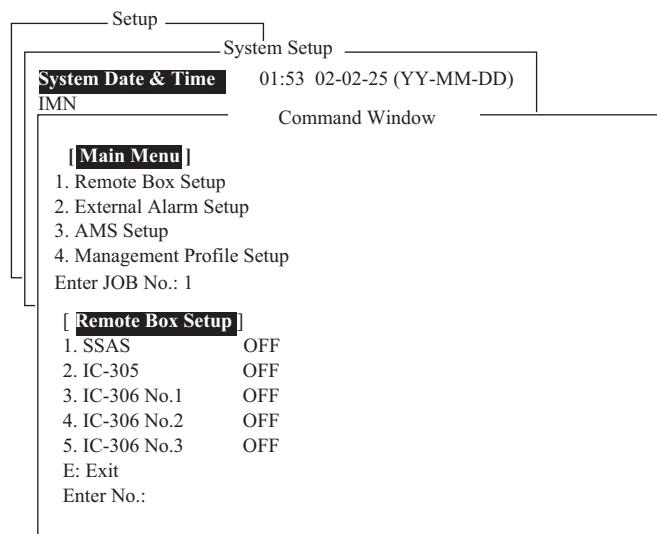

4. Confirm that [IMN] is selected, and then press the **Enter** key.
An input box appears.
5. Key in your IMN.
6. Press the **Enter** key.
To clear the IMN, select [IMN], then press **I, M, N** while pressing the **Alt** key. Repeat step 4 to step 6 to input the correct IMN.
7. Press the **Esc** key.
8. Press the **Enter** key.
9. Press the **Esc** key.

3.2 How to Set External Equipment

The FELCOM 18 is set at the factory to accept the distress alert/received call unit IC-305, up to three alarm units IC-306 and the SSAS alert unit IC-307. If the configuration is different, change the setting to OFF as below.

1. Press the **F8** key to show the [Setup] menu.
2. Press the **1** key to show the [System Setup] menu.
3. Press the **↓** key to select [Command Window], and then press **Enter** key to show the [Command Window] screen.
4. Enter the [Enter JOB No.:], and then press the **Enter** key.
5. Enter the [PASSWORD:], and then press the **Enter** key. [Main Menu] is highlighted.
6. Press the **1** and **Enter** keys in order.

Command Window screen

7. Press the number key for unit not connected. For example, press the **1** and **Enter** keys when the SSAS alert unit IC-307 is not connected.

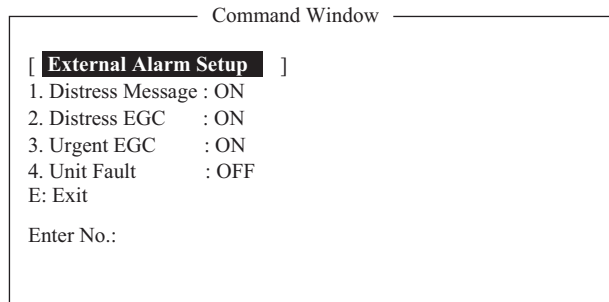

Setting window for IC-307

8. If the unit is not connected, press the **1** key, and the **Enter** key. To return to the [Remote Box Setup] menu, press the **E** key (not any numeric key).
9. Repeat step 7 to step 8 for other units not connected.
10. Press the **Esc** key several times to close the menu.

3.3 How to Set the Alarm Contact

1. Press the **F8** and **1** keys to show the [System Setup] menu.
2. Press ↓ to select [Command Window], and then press the **Enter** key.
3. Enter the [Enter JOB No.:], then press the **Enter** key.
4. Enter the [PASSWORD:], and then press the **Enter** key.
[Main Menu] is highlighted.
5. Press the **2** key, and the **Enter** key.

6. Press a numeric key (1 to 4), then press the **Enter** key.
To detect the error on a unit, press **4** and **Enter** in order.

```

-----
[ Unit Fault ]
1. ON
2. OFF  E: Exit
-----

```

7. Press the **1**, and **Enter** keys.
To return to the [External Alarm Setup] menu, press the **E** key.
8. Repeat steps 6 and 7 to set other alarm contacts.
9. Press the **Esc** key several times to close the menu.

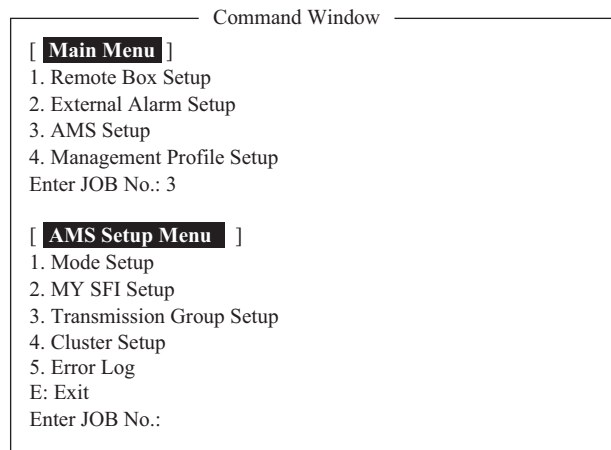

3.4 How to Set up the AMS/BAM

Do the following to connect the AMS (Alert Management System).

1. Press the **F8** and **1** keys to show the [System Setup] menu.
2. Press ↓ to select [Command Window], and then press the **Enter** key.
3. Enter the [Enter JOB No.:], then press the **Enter** key.
4. Enter the [PASSWORD:], then press the **Enter** key.

3. INITIAL SETTINGS

5. Press the **3** key, and the **Enter** key.
The [AMS Setup Menu] appears on the [Command Window].

6. Press appropriate numeric key (1 to 4), then press the **Enter** key.
To return to the [AMS Setup Menu], press the **E** key at the setting window.

1 key: [Mode Setup]

Set the alert mode.

[Legacy]: Select when no AMS/BAM is connected.

[AlertIF1]: Select when AMS is connected.

[AlertIF2]: Select when BAM is connected.

For [AlertIF1], the option window shown to the right is displayed. To return to the [AMS Setup Menu] from this window, press the **E** key twice.

[Distress Alarm Stop Enable]: The AMS can stop the alarm sound when the Distress Priority message is received.

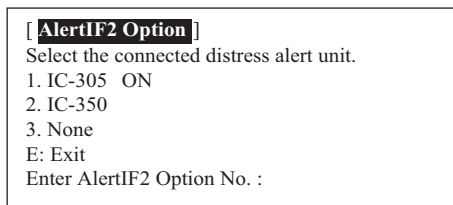

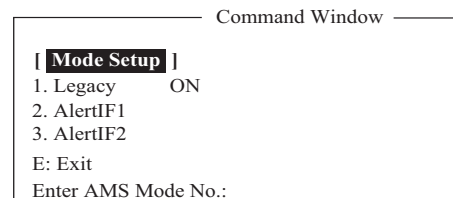

[Distress Alarm Stop Disable]: The AMS can not stop the alarm sound when a Distress Priority message is received.

For [AlertIF2], select the connected Distress Alert Unit. If there is no unit connected, select [3].

2 key: [MY SFI Setup]

Set this FELCOM's SFI number, which is the four-digit number that follows "CS". (The setting range is 0001 to 9998.)

Note: Be sure to use an SFI not used by other devices in the shipboard network.

3 key: [Transmission Group Setup]

Set the transmission group of this equipment according to the transmission group of connected AMS/BAM equipment.

```

5 key: [Error Log]

The [Error Log] compiles AMS related errors. To delete an error log entry, select the log then press the **1, Enter** key.

```
Command Window
[ Error Log ]
Datagram header error  xxxxxxxxxxx*
TAG block formatting error xxxxxxxxxxx
TAG checksum error    xxxxxxxxxxx
TAG syntax error      xxxxxxxxxxx
TAG framing error     xxxxxxxxxxx
Sentence syntax error  xxxxxxxxxxx
UDP checksum error    xxxxxxxxxxx
Total                 4294967295  LIMIT MAX

1. Log Clear
E: Exit
Enter JOB No.

*: xxxxxxxxxxx: Error log count
```

The error log holds 4294967296 entries. When that count is reached, the message "LIMIT MAX" appears.

7. Press the **Esc** key several times to close the menu.

3.5 How to Select Position-fixing Equipment

Select the position-fixing equipment that is to feed navigation data to the FELCOM.

1. Press the **F8** and **1** keys to show the [System Setup] menu.
2. Select [NAV Port] then press the **Enter** key.
3. Select the navigator to use, then press the **Enter** key.
OFF: Manually input the position of own ship. Alarm is outputted when the position data is not updated every four hours.
Auto: INT or EXT is automatically selected. For SSAS Russia and LRIT Russia, the setting of [NAV Port] is fixed at Auto and GLONASS is prioritized.
INT: Use the navigator that is built into the terminal unit.
EXT: Use an external navigator.
4. Press the **Esc** key several times to close the menu. The [Update] window appears.
5. Select [Yes] then press the **Enter** key.

3.6 How to Set up for 2nd DTE

For a 2nd DTE, do the procedure shown below.

1. Press the **F8** and **3** keys to show the [Terminal Setup] menu.

Terminal Setup	
Connection	
Date Disp. Form	YY-MM-DD
Screen Saver	OFF
Window Color	
Window Size	Normal

Terminal Setup menu (for 2nd DTE)

2. [Connection] shows the name of the terminals available for connection to the LAN interface. Press the **Enter** key to show the [Connect List].

Connect List				
No.	Name	IMN	IP Address	Software Version
*01	F18_123456	123432588	172.31.16.100/24	1650247-01
02	F18_133234	456789210	192.168.16.11/24	1650247-01
03				
04				
05				
06				
07				
08				
09				
10				

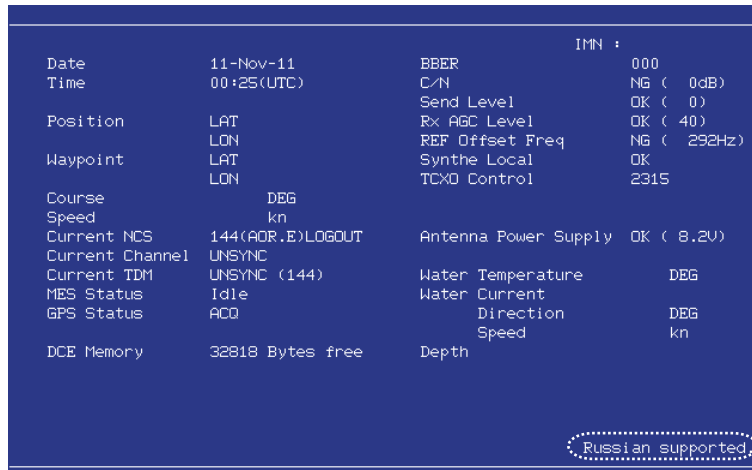

The No., Name, IMN, IP address and software version of each terminal are shown. The asterisk marks the terminal currently selected for communication.

3. To connect to a different terminal, select it then press the **Enter** key. The [Connect] window appears and [Yes] is selected. Press the **Enter** key to connect the terminal.

3.7 How to Set the Russian Language

Do the following to create a message in Russian.

1. Press the **F8** and **1** keys to show the [System Setup] menu.
2. Press ↓ to select [Command Window], and then press the **Enter** key.
3. Type "RUSSIAN ON" in the [Enter JOB No.:], then press the **Enter** key.
The language is switched to Russian and the message "Russian supported." appears at the bottom of the standby display.
To restore the previously used language, type "RUSSIAN OFF" in the [Enter JOB No.:], then press the **Enter** key. "Russian supported." disappears from the screen.

4. Press and hold down the left **Shift** key while pressing the left **Alt** key.
The language for the keyboard is switched from English to Russian. The Scroll Lock lamp lights when Russian is selected. To switch the language from Russian to English, press and hold down the left **Shift** key while pressing the left **Alt** key.
Note: With a 2nd DTE, Russian can be input from the keyboard of your PC. See your PC's owner's manual for how to switch languages.
5. Put the key template for Russian (OP05-135) on the keyboard of your PC.

3.8 How to Use the Paper Save Function

The Paper Save function allows you to choose whether to print the "Successful Data Report Sending" confirmation after a data report is sent.

1. Press the **F8** and **1** keys to show the [System Setup] menu.
2. Press ↓ to select [Command Window], and then press the **Enter** key.
3. At the [Enter JOB No.:] prompt, type "Paper Save", then press the **Enter** key. A message is displayed showing the status of the Paper Save function (ON or OFF).
4. To change the setting, type "Paper Save ON" (No report is printed) or "Paper Save OFF" (Report is printed), as appropriate, then press the **Enter** key.

3.9 How to Output EGC Messages

The FELCOM can output EGC messages to a navigation device (via the FELCOM's LAN port) that can receive EGC messages.

The output messages, in IEC 61162 format, are SM1, SM2, SM3, SM4, and SMB.

1. Press the **F8** and **1** keys to open the [System Setup] menu.
2. Select [EGC Output Port] then press the **Enter** key.
3. Select [LAN] or [INT+LAN] as appropriate, then press the **Enter** key.

[INT]: Output EGC messages to the main terminal.

[LAN]: Output EGC messages to the sub terminal or other navigation device connected to the LAN Port on the main terminal.

Note: When [LAN] is selected, the main terminal does not print and display EGC messages with priority other than urgent or distress.

[INT+LAN]: Output EGC messages to the main terminal, sub terminal and other navigation device.

3. INITIAL SETTINGS

This page is intentionally left blank.

4. HOW TO INSTALL OPTIONAL EQUIPMENT

4.1 GPS Board OP16-62

This chapter provides the procedure for the installation of the GPS board (in the terminal unit), which provides GPS position information.

Name: GPS board

Type: OP16-62

Code No.: 001-180-100

Name	Type	Code No.	Qty
Binding Screw	M3x6	000-163-479-10	3
GPS Board	16P0246	004-656-550	1
Connector Assy.	51065-0700-PHR7-L110	000-176-305-10	1

Note: Use anti-static gloves to handle board.

1. Unfasten 18 screws, six spacers and three nuts to remove the terminal unit cover.

2. Fasten three binding screws (M3x6, supplied with the kit) to attach the GPS Board to the RF cover.

4. HOW TO INSTALL OPTIONAL EQUIPMENT

- Attach the 51065-0700-PHR7-L110 connector assy. between J13 on the TER-MCPU Board and J1 on the GPS board.

- Attach the cable from the GPS board to J6 on the RF COMM CPU Board. Use the clamp next to the connector to fix the cable.
- Reassemble the terminal unit.

4.2 IPX2 Kit OP16-58/OP16-59

The optional kits OP16-58 and OP16-59 are used to protect the connectors on the terminal unit from water splash. Note that these optional kits should be used as a pair.

4.2.1 OP16-58 (cables)

Connect the waterproofed D-sub cables to the rear of the terminal unit, instead of the standard supply cable. For the connection at the IC-318, see section 4.3.

OP16-58 (Code No.: 001-180-070)

Name	Type	Code No.	Qty
Cable Assy.	H230817-1	001-176-552-10	1
	H230817-2	000-176-553-10	1
	XM-FD-361	000-176-551-10	1

4.2.2 OP16-59 (for connector ports)

OP16-59 (001-180-080)

Name	Type	Code No.	Qty
Sponge for Dsub	16-023-3531	100-369-600-10	1
Cover for BNC	16-023-3534	100-369-630-10	1
Cover for USB	16-023-3535	100-369-641-10	1
USB Support	16-023-3536	100-369-650-10	1
Sponge for BNCR	16-023-3541	100-369-690-10	1
Dummy Plate 9P	16-023-3542	100-368-190-10	1
Dummy Plate 15P	16-023-3543	100-369-700-10	1
Dummy Plate 25P	16-023-3544	100-369-710-10	1
Binding Screw	#4-40UNCX3/16	000-176-619-10	6

USB port

4. HOW TO INSTALL OPTIONAL EQUIPMENT

D-sub ports

①

Peel the paper from the sponge for Dsub (16-023-3531), then attach the sponge to the D-sub connectors at the rear of the terminal unit.

② (Cables connected)

Connect the cables supplied with OP16-58 to the appropriate ports.

(No cables connected)

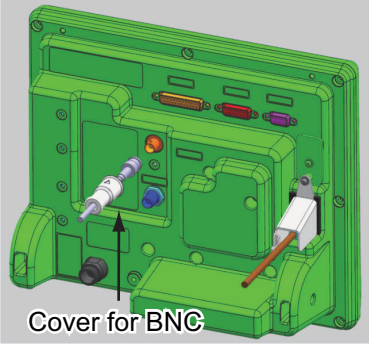

Use the binding screws (#4-40UNCx3/16) to fix the dummy plates (for 9P, 15P and 25P) to the appropriate ports.

DGPS port

(Coaxial cable connected)

① Pass the coaxial cable through the slit on the cover for BNC (16-023-3534).

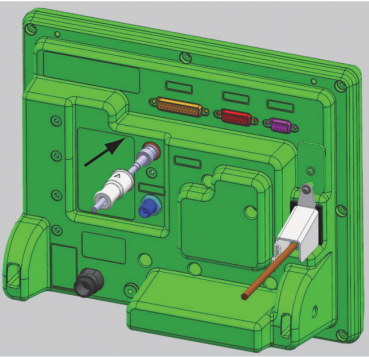

Cover for BNC

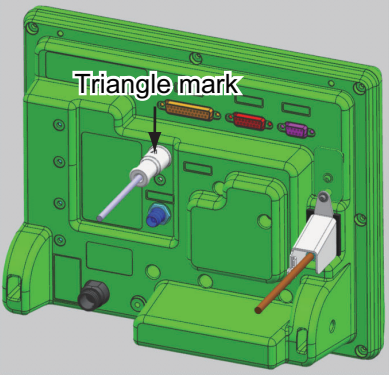

② Attach the connector* of the coaxial cable to the DGPS port.

*For waterproofing, use the connector assy. shown below:
-BNCP-58U-BNCP L-200 (000-161-953-11)
-BNCP-58U-BNCP L-290 (000-175-274-11)

③ Slide the cover for BNC on the connector to cover the connector. Confirm that the triangle mark on the cover is upward.

Triangle mark

4. HOW TO INSTALL OPTIONAL EQUIPMENT

(Coaxial cable not connected)

①

Remove the cap from the DGPS port, then attach the sponge for BNCR (16-023-3541) around the port.

②

Re-attach the cap to the DGPS port.

4.3 Waterproofing Kit OP16-60/OP16-67/OP16-68

You can use the optional waterproof kits to keep water splash out of the unit. Note that each kit is specifically designed for each unit.

OP16-60 (for IC-318)

The IC-318 should be installed on a desktop. To ensure the waterproof rating is maintained, use the optional waterproofing kit OP16-60. If a floor installation is required, make sure the area is not subject to water splash, rain or other water ingress.

OP16-60 (Code No.: 001-180-090)

Name	Type	Code No.	Qty
Cover gasket	16-023-5502	100-373-530-10	1
Grommet	16-023-5503	100-373-541-10	1

When the OP16-58 (described in paragraph 4.2.1) is used, replace the cable from the IC-318 with the XM-FD-361 as shown below.

4. HOW TO INSTALL OPTIONAL EQUIPMENT

OP16-67 (for IC-305), OP16-68 (for IC-307)

Note: To maintain the waterproofing, these units must be installed on a bulkhead or wall, with the cable entry facing downwards. Further, the optional kits do not provide waterproofing if the unit is installed with the cable entry facing upwards.

OP16-67 (Code No.: 001-189-380)

Name	Type	Code No.	Qty
Fixing Tape	24-009-1225	100-366-200-10	2

OP16-68 (Code No.: 001-189-400)

Name	Type	Code No.	Qty
Waterproofing Cover	16-023-5501	100-374-950-10	1
Fixing Tape	24-009-1225	100-366-200-10	2

1. Unfasten four screws to remove cover of IC-305/IC-307.
2. Attach supplied fixing tape to the underside of the cover as shown in the illustration below.

3. Attach the cover.
4. For IC-307, remove the seal from the waterproofing cover and attach the cover as shown in the illustration below.

5. HOW TO CHANGE POWER SUPPLY SPECIFICATIONS

The AC-DC power supply PR-240 is shipped ready for connection to a 200-230 VAC ship's mains. If the ship's mains is 100 VAC, change the tap connection and terminal board connection as below. Attach a label supplied as accessories to the front panel according to the ship's mains.

Ship's mains	Tap connection	Terminal board	Label
200 to 230 VAC	SEL 230 V	Below (a)	200-230 VAC, 2.2-1.7 A, 1 ϕ 50/60 Hz
100 to 115 VAC	SEL 115 V	Below (b)	100-115 VAC, 3.2-2.6 A, 1 ϕ 50/60 Hz

Note: The DC output load must be less than 8 A.

5. HOW TO CHANGE POWER SUPPLY SPECIFICATIONS

This page is intentionally left blank.

APPENDIX 1 JIS CABLE GUIDE

Cables listed in the manual are usually shown as Japanese Industrial Standard (JIS). Use the following guide to locate an equivalent cable locally.

JIS cable names may have up to 6 alphabetical characters, followed by a dash and a numerical value (example: DPYC-2.5).

For core types D and T, the numerical designation indicates the *cross-sectional Area (mm²)* of the core wire(s) in the cable.

For core types M and TT, the numerical designation indicates the *number of core wires* in the cable.

1. Core Type

- D: Double core power line
- T: Triple core power line
- M: Multi core
- TT: Twisted pair communications (1Q=quad cable)

2. Insulation Type

- P: Ethylene Propylene Rubber

3. Sheath Type

- Y: PVC (Vinyl)

4. Armor Type

- C: Steel

5. Sheath Type

- Y: Anticorrosive vinyl sheath

6. Shielding Type

- S: All cores in one sheath
- S: Individually sheathed cores
- SLA: All cores in one shield, plastic tape w/aluminum tape
- SLA: Individually shielded cores, plastic tape w/aluminum tape

			OUTLINE DRAWING

- 手順
0. 4mケーブル組品を使用するときは、コネクタプラグをアンテナ上部底のコネクタに接続した後、ケーブルの下からイラックススリーブを通しておく。
0. 4mケーブル組品を使用しないときは、アンテナ台の下から30mケーブルを通し、イラックススリーブを通してコネクタプラグをアンテナ上部底のコネクタに接続する。
 - イラックススリーブを熱で固着し(110℃以下)、自己融着テープおよびビニルテープで固定する。
固定範囲は50mm以内。高温で熱すると部材の一部を変形させる恐れがあるので注意する。
 - アンテナ台をアンテナ上部にネジ3本で固定する。
うち一本のネジは、アース線(圧着端子付)を共締めする。
 - アンテナ台のネジ部にシール剤を塗布する。
 - アンテナ台をホースクランプ2本でマストに固定する。
 0. 4mケーブル組品を使用するときは、がい装付ケーブルのコネクタを接続し、自己融着テープ、ビニルテープで固定する。
 - ケーブルをマストに固定し、アース線をマストに接続する。
ケーブルは耐候性コンベックスで固定する。
 - *部分をシール剤で完全に覆う。

- PROCEDURE
- FOR CONNECTION OF CABLE ASSY.(0.4m)
CONNECT THE CONNECTOR PLUG OF CABLE ASSY. TO ANTENNA UNIT.
THEN PASS HEAT-SHRINK TUBING FROM THE OTHER SIDE OF CABLE ASSY.
FOR CONNECTION OF CABLE W/ CONNECTOR (30m).
PASS THE ANTENNA CABLE THRU THE HOLE IN THE CENTER OF THE ANTENNA BASE. THEN PASS HEAT-SHRINK TUBING ONTO THE CABLE.
CONNECT THE CABLE PLUG TO ANTENNA UNIT.
 - FIX THE SHRINK TUBE WITH HEAT (+110°C OR LESS) AND BIND WITH SELF-BONDING TAPE AND VINYL TAPE.
WRAPPING LENGTH: WITHIN 50 mm. DO NOT HEAT WITH HIGH TEMPERATURE TO AVOID DISTORTION OF ANTENNA PARTS.
 - FIX THE MOUNTING BASE TO ANTENNA UNIT WITH 3 SCREWS.
FASTEN THE GROUND WIRE TO A SCREW WITH THEM WITH CRIMP-ON LUG.
 - APPLY SILICONE SEALANT TO SCREWS OF MOUNTING BASE.
 - FIX THE MOUNTING BASE TO MAST WITH TWO HOSE CLAMPS SECURELY.
 - CONNECT THE ARMORED CABLE CONNECTOR TO THE CABLE ASSY.
 - WRAP THE CONNECTORS WITH SELF-BONDING TAPE AND VINYL TAPE.
 - FIX THE ANTENNA CABLE WITH WEATHERPROOF CABLE TIES AND CONNECT GROUND WIRE TO MAST.
 - COVER SCREW HEADS MARKED '*' WITH SILICONE SEALANT.
